# Test "Everything, Everywhere, All At Once"

# What & Why **Continuous Testing** ?

“Resolving defects in production **can cost 30 times more**”

**Software Development**

Integrating Unit & Integration Tests

**Production Monitoring**

Maintaining & Improving Software/App

**Testing**

Executing Extensive QA

**Deployment**

Ensuring Reliable Deployment

# The Roadblocks to **Continuous Testing**

Continuous testing is pivotal for modern software development, yet it presents several intricate challenges that can derail your testing strategy and prevent you from achieving it.

“Continuous testing can greatly reduce the time spent by development teams on reworking defects, which studies show can consume 15-35% of their time. However, the complexity of implementing a continuous testing strategy can present a barrier, underscoring the need for robust and integrated testing solutions.”

**Expert Beacon**

# Typical Enterprise Tool Stack

## Varied Vendors

Managing a multitude of testing tools.

## Multiple Integrations

Unifying diverse systems.

## Lack of Visibility

Gaining clear insights throughout testing.

## Lack of Cohesion

Merging test components effectively.

# BlazeMeter's Five Functional Modules

# One Platform – Multiple Benefits

CAPABILITY

VALUE

|  |  |   |
|--|--|---|
| <b>BlazeMeter</b><br>Performance & GUI Functional Testing  | Simulate thousands or millions of virtual users. Test End User Experience. | <ul style="list-style-type: none"><li>• Baseline reporting and comparison</li><li>• Improve test search capabilities for faster discovery</li><li>• Updated browser support for GUI Functional testing</li></ul>  |
| <b>BlazeMeter Test Data</b><br>Synchronized Test Data      | Build synthetic test data from BlazeMeter                                  | <ul style="list-style-type: none"><li>• Compliant test data for every test, synchronized across tests, services, &amp; SUT</li><li>• Generate synthetic data at test execution</li><li>• Import/Export Data Models</li></ul>                                |
| <b>BlazeMeter Virtual Services</b><br>Virtualized Services | Virtualize and continue to test all parts of your system                   | <ul style="list-style-type: none"><li>• Build virtual services for any test</li><li>• Inspection view and historical reporting</li><li>• Virtual Server Engine: Secure Integrations to enterprise test environments with complex virtual services</li></ul> |
| <b>BlazeMeter API</b><br>Agile API Testing / Monitoring    | Start monitoring your APIs in seconds                                      | <ul style="list-style-type: none"><li>• Full visibility to perform health and performance of code to ensure structure and content of API calls are returning data you expect</li></ul>  |

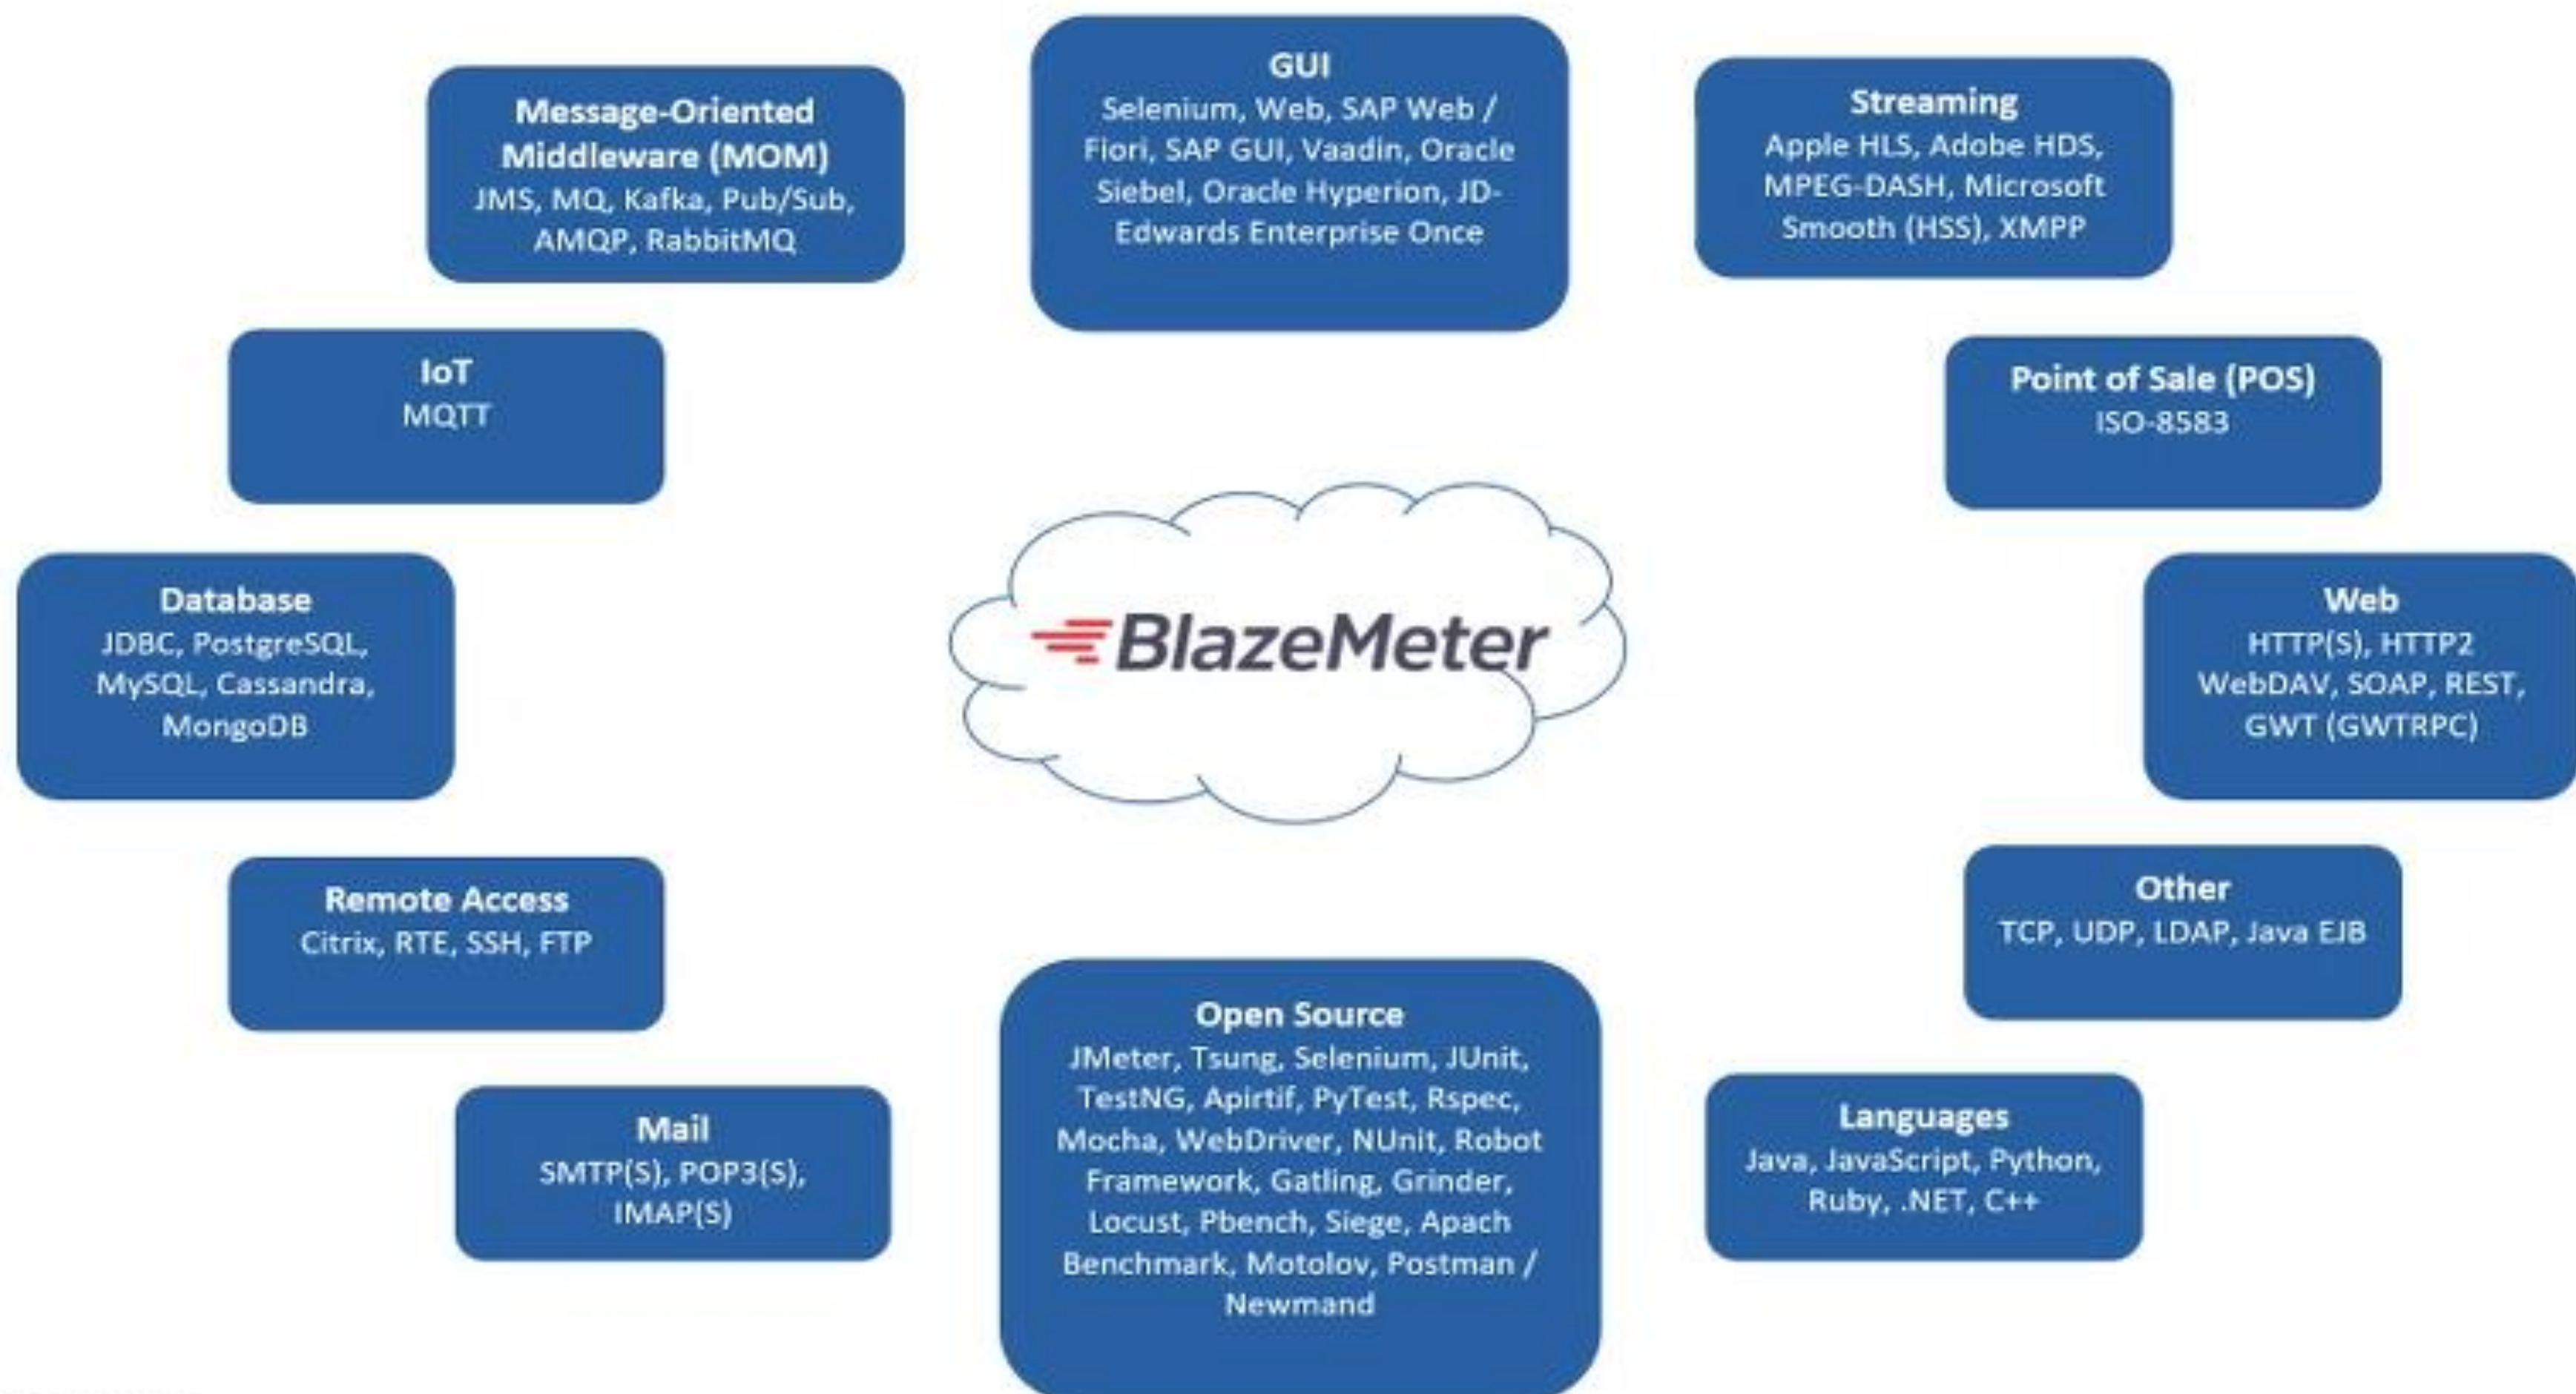

# “Parallel Runs” – meaning ?

- **"1 parallel"** = 1 x 1000 VU – only **ONE** test can be run **at any one time**, at any scale from 1 – 1000 VU
- **"5 parallel"** = **UP TO 5** tests can be run **at any one time**, in any variation from 1 – 1000 simultaneous VU **total**
  - 1 x 1000
  - 2 x 500 VUH or....
  - 5 x 200 VUH
- **“no limit”** = **ANY NUMBER** of simultaneous tests from 1 – 1000 VU **total**
  - 1 x 1000 VUH
  - 2 x 500 VUH
  - 5 x 200 VUH
  - 10 x 100 VUH
  - 100 x 10 VUH....etc etc

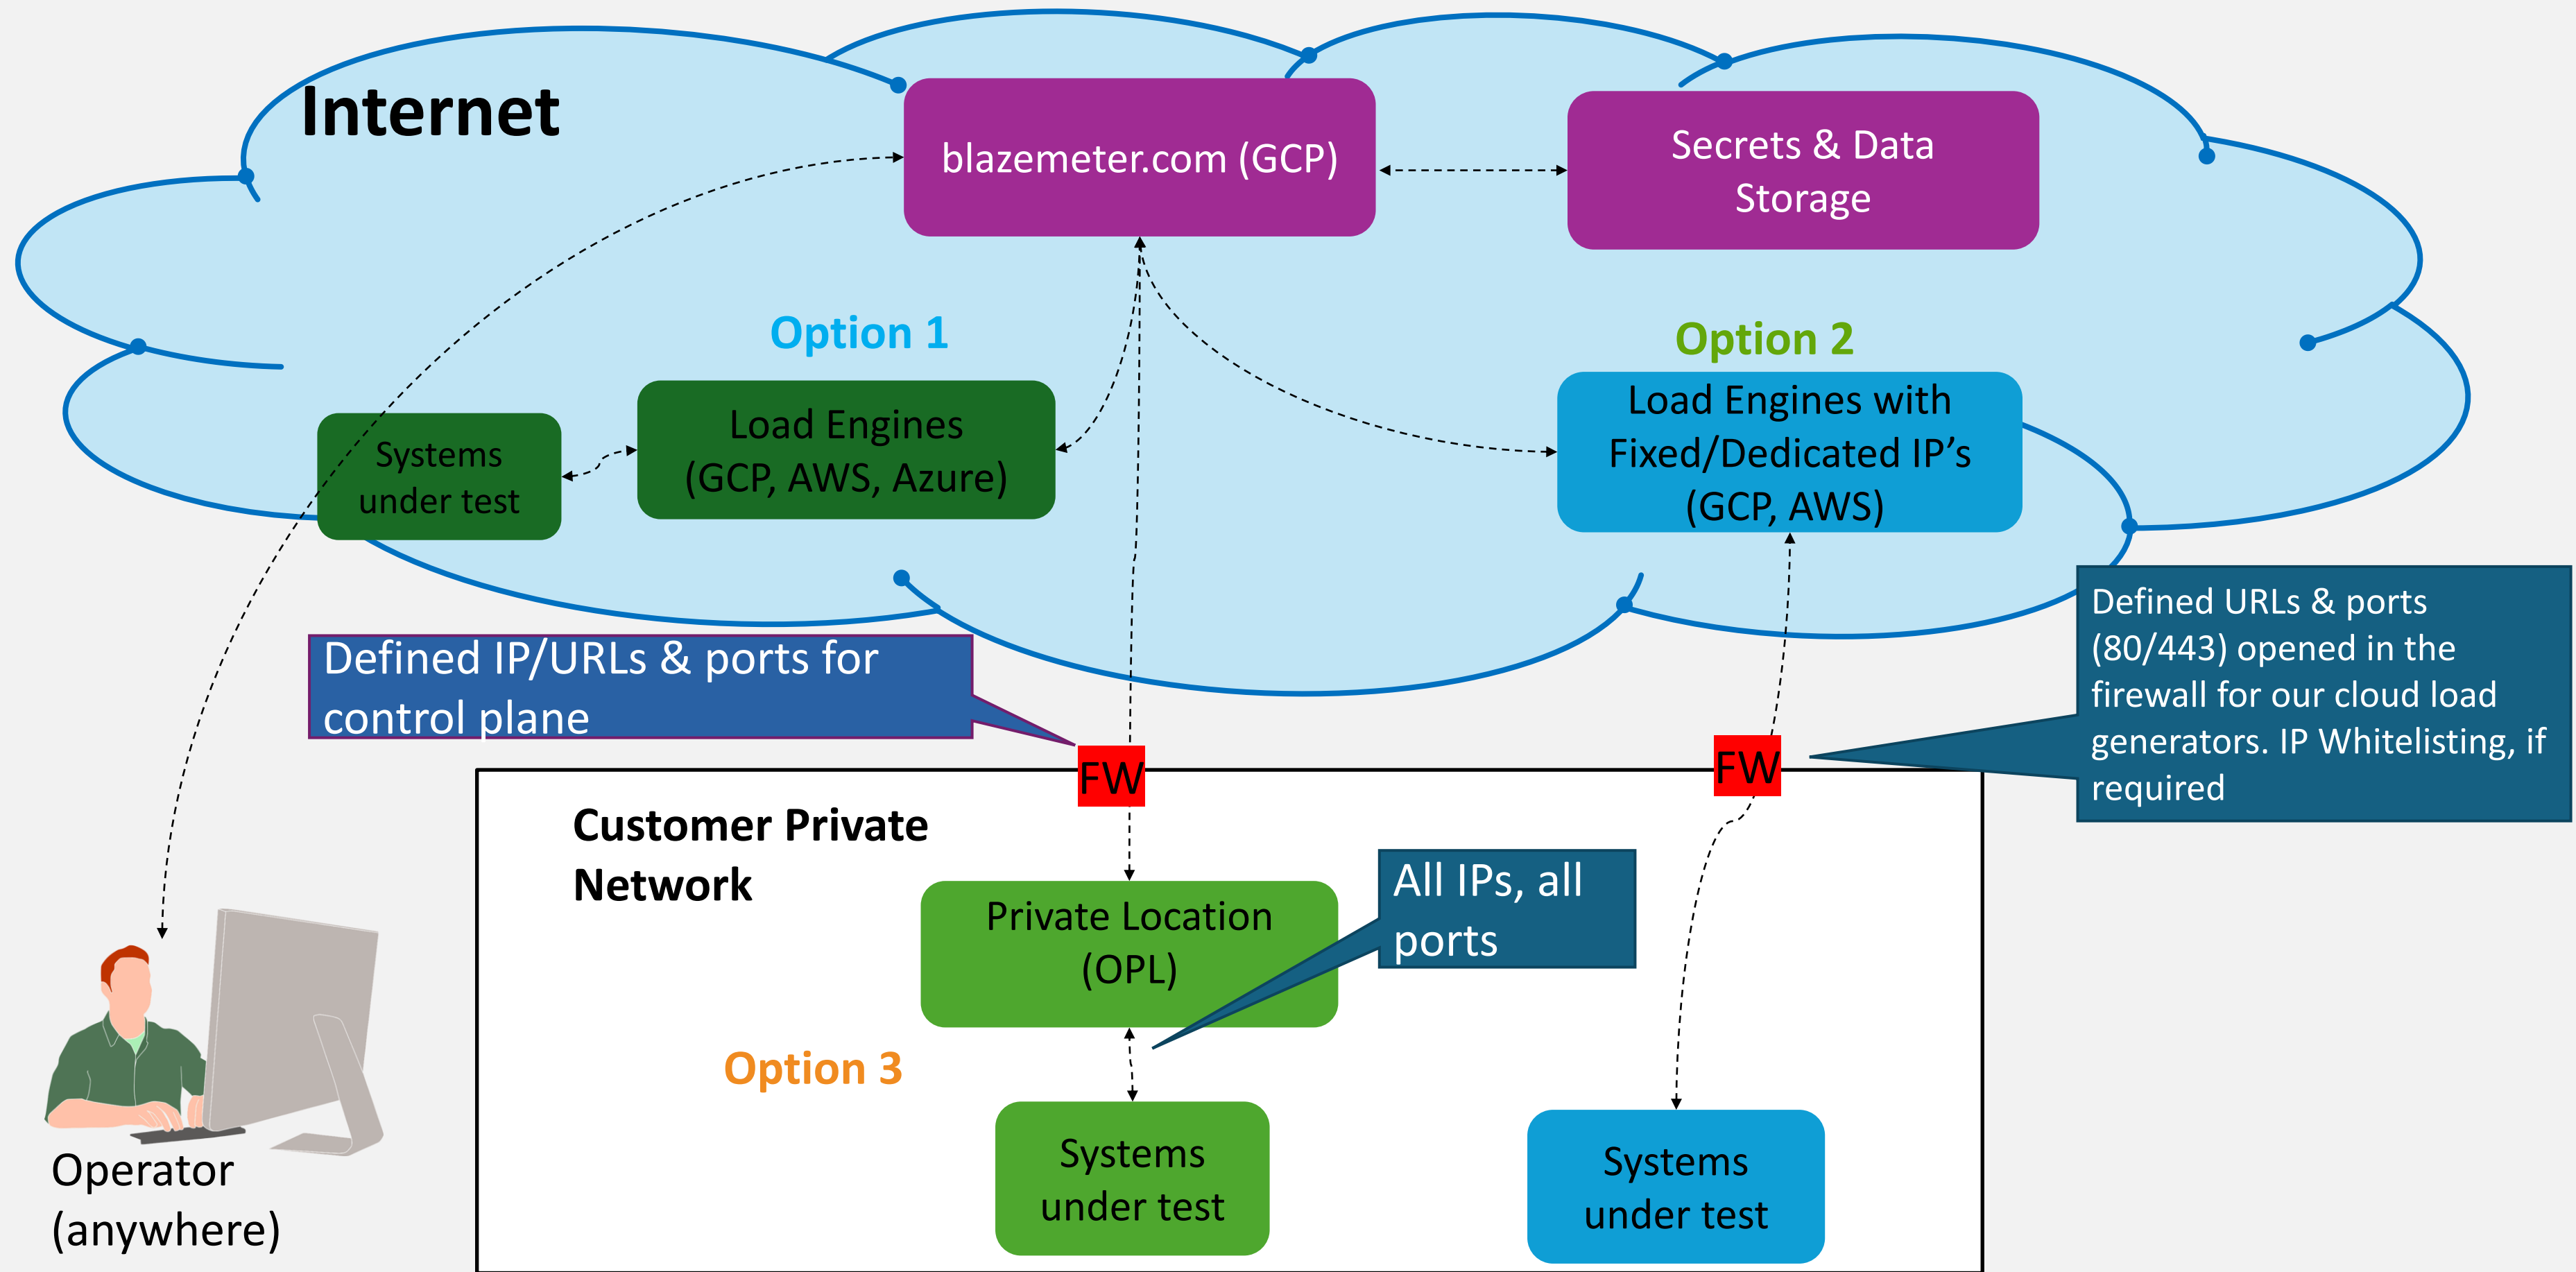

# Concurrent Variable Units (CVUs) Consumption Examples

- **Scenario 1 - 5,000 CVUs: Pure Performance Testing**
  - 1 test with 5,000 Concurrent Virtual Users at a time = **5,000 CVUs**, OR...
  - 5 tests with 1,000 Concurrent Virtual Users at a time = **5,000 CVUs**
  - Combination not to exceed 5,000 Concurrent Virtual Users at any point in time
  
- **Scenario 2 - 5,000 CVUs: Performance Testing + Other Capabilities**
  - 1 perf test running with 1,000 Concurrent Virtual Users = **1,000 CVUs**, PLUS...
  - 10 functional tests running (i.e., 10 browser sessions) = **1,000 CVUs**, PLUS...
  - 20,000 transaction in 1 running virtual service = **1,000 CVUs**, PLUS
  - 200,000 API monitoring calls = **1,000 CVUs**, PLUS
  - Test Data leveraged for the 1,000 CVU perf test **and** 1,000 CVU virtual service = **1,000 CVUs**,
  - TOTAL of **5,000 CVUs** being consumed

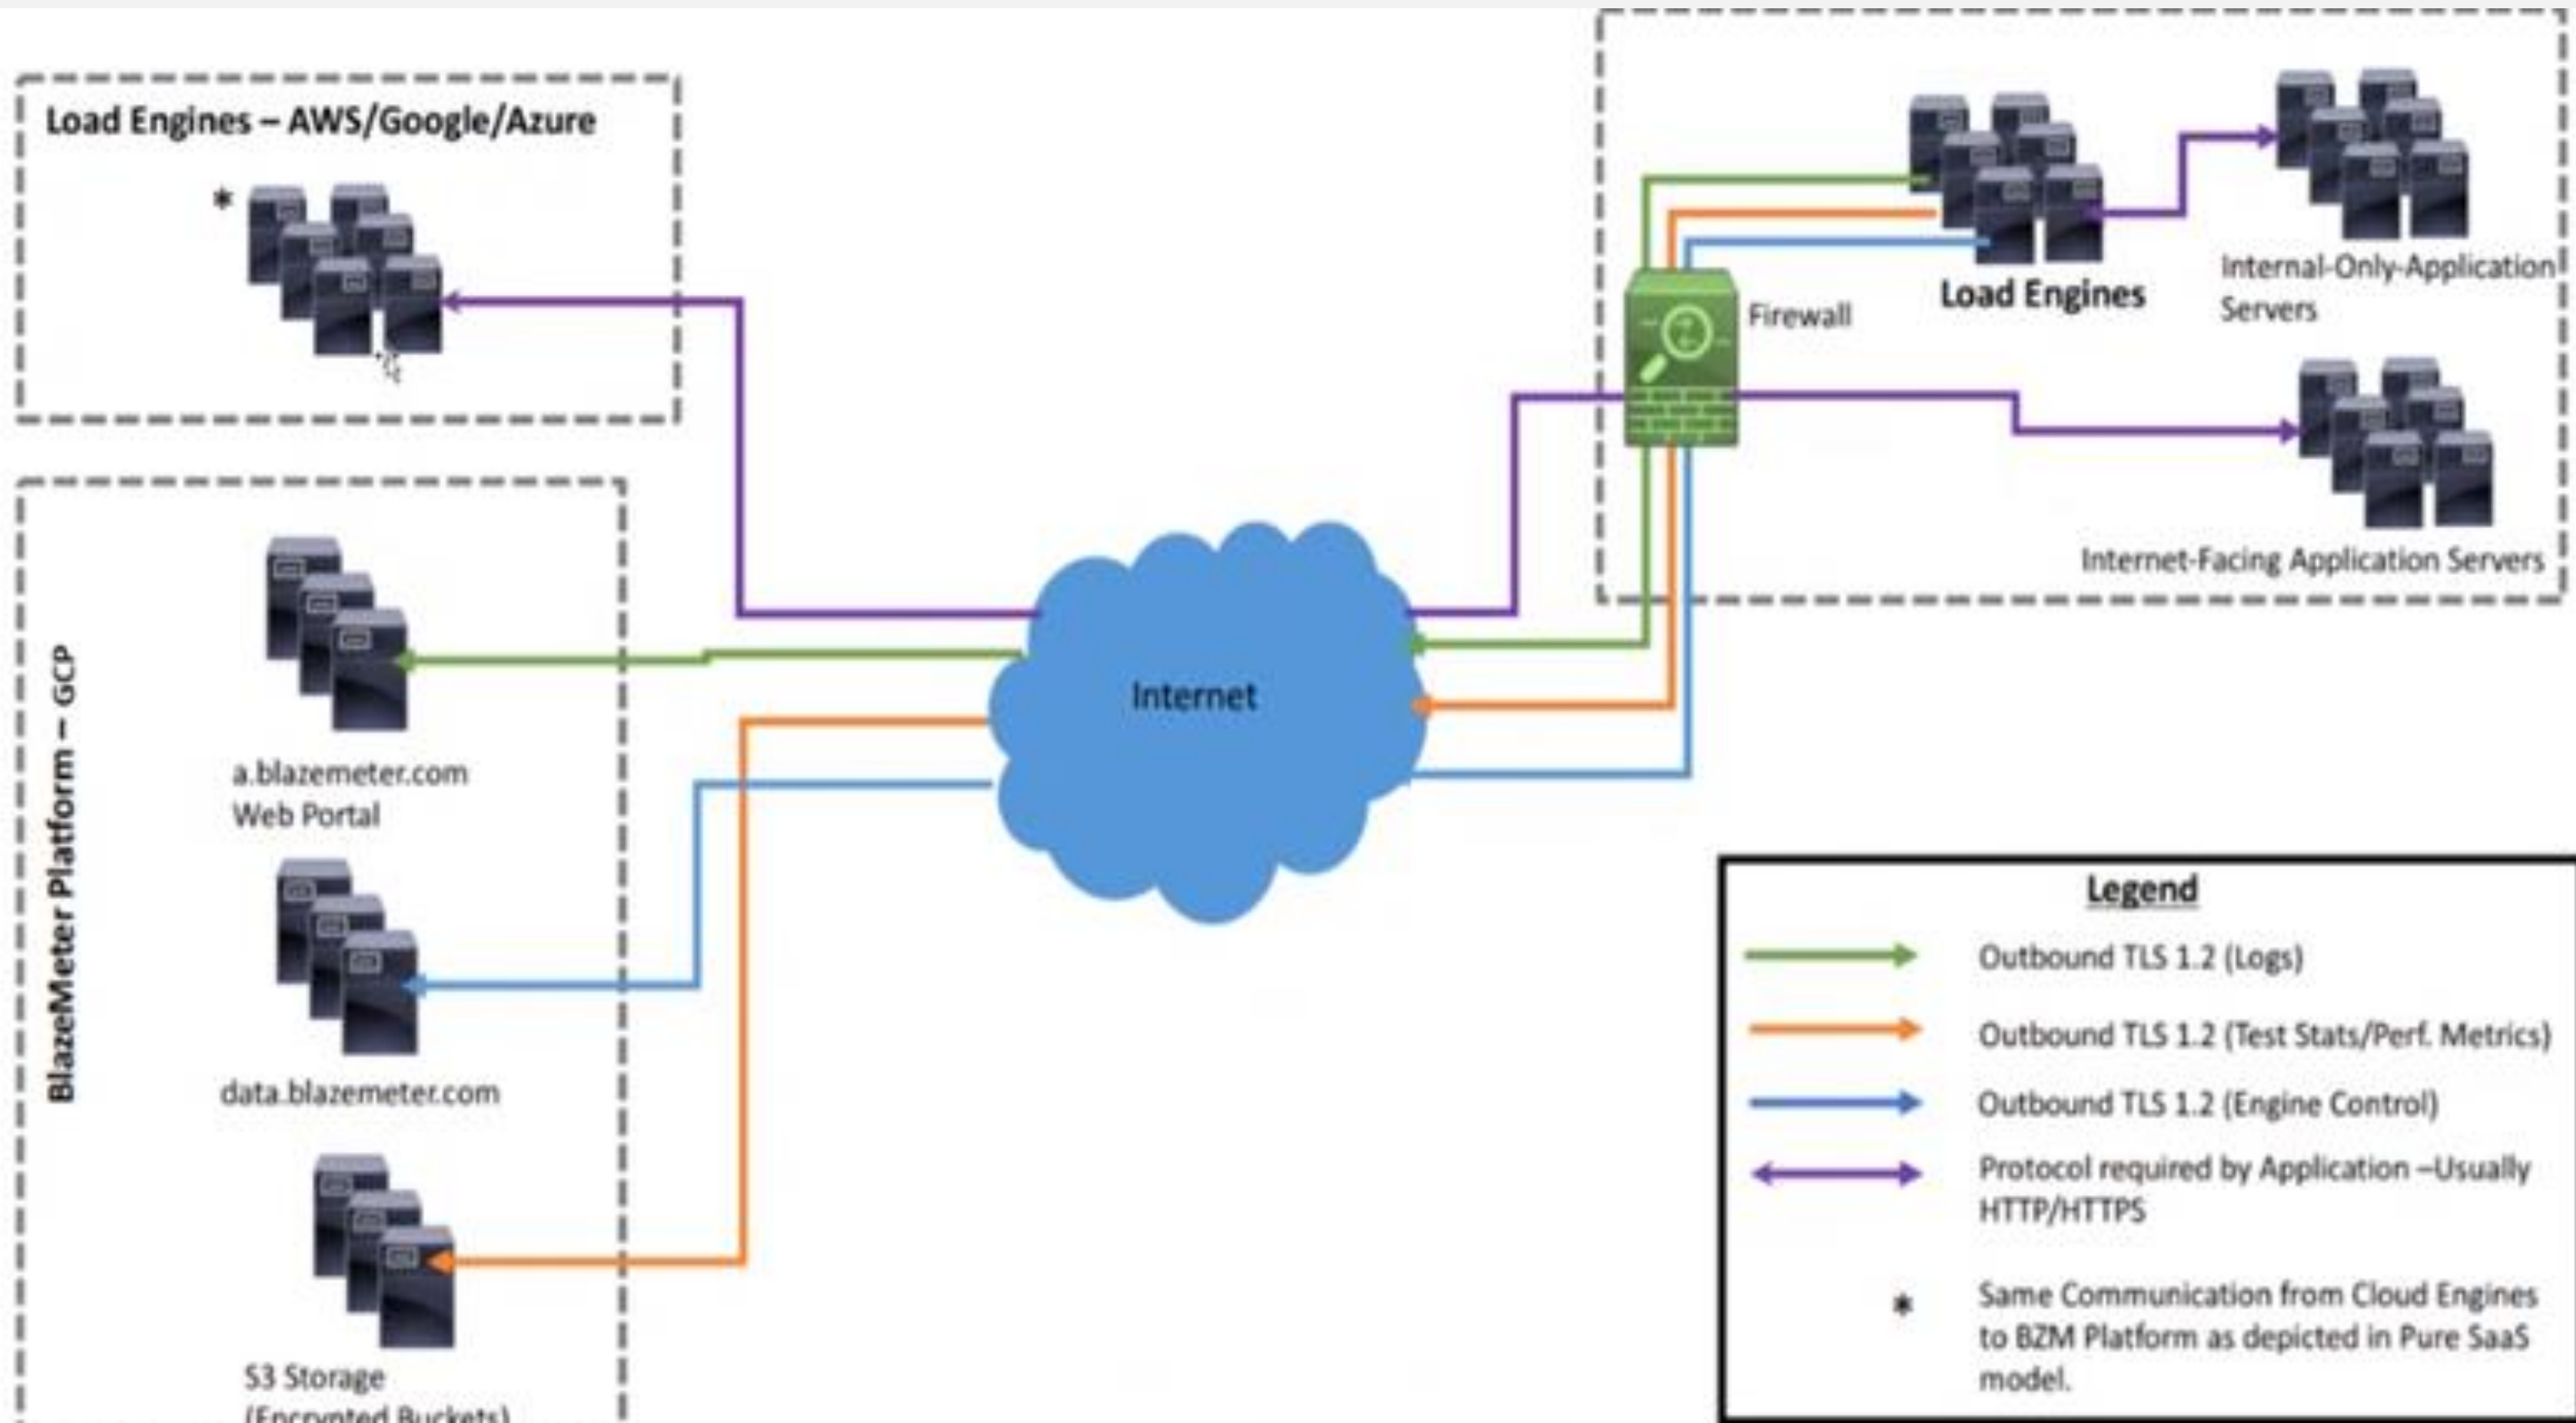

# BlazeMeter Platform supported - Technology and Protocols

# Blazemeter Connection Details

# Mobile App Performance Testing

# BlazeMeter Usage Options: **Pros and Cons**

| Option  | Pros   | Cons   |
|---|--|--|
| <b>1- Cloud Load Engines</b>                    | Zero Load engine infrastructure managed by customer, zero maintenance, reduced complexity, quickest TTV                    | Typical security concerns                                      |
| <b>2- Cloud load engines with Dedicated IPs</b> | Zero Load engine infrastructure managed by customer, zero maintenance, reduced complexity                                  | High inbound firewall traffic, limited by inbound connectivity |
| <b>3- Private Locations (OPL)</b>               | Reduced complexity, less inbound firewall traffic, not limited by inbound connectivity, additional data management options | Load engine infrastructure managed by customer                 |

# Some Sample Customers

Saved Hundreds of Thousands of \$ per year by moving from legacy processes and tools.

Helped de-risk Model 3 launch within 48 Hours (after having failed with a competing vendor)

Ensure customer experience even under peak load (1M user load tests)

Over 11M VUH across various divisions – Marvel, ESPN+, ABC Dancing with Stars

Eliminates bottlenecks and provides complete test environments on demand

Performance testing their Membership Portal for Performance and Security

# Some APAC Customers

Over 75% of Fortune 100 Companies use Perforce

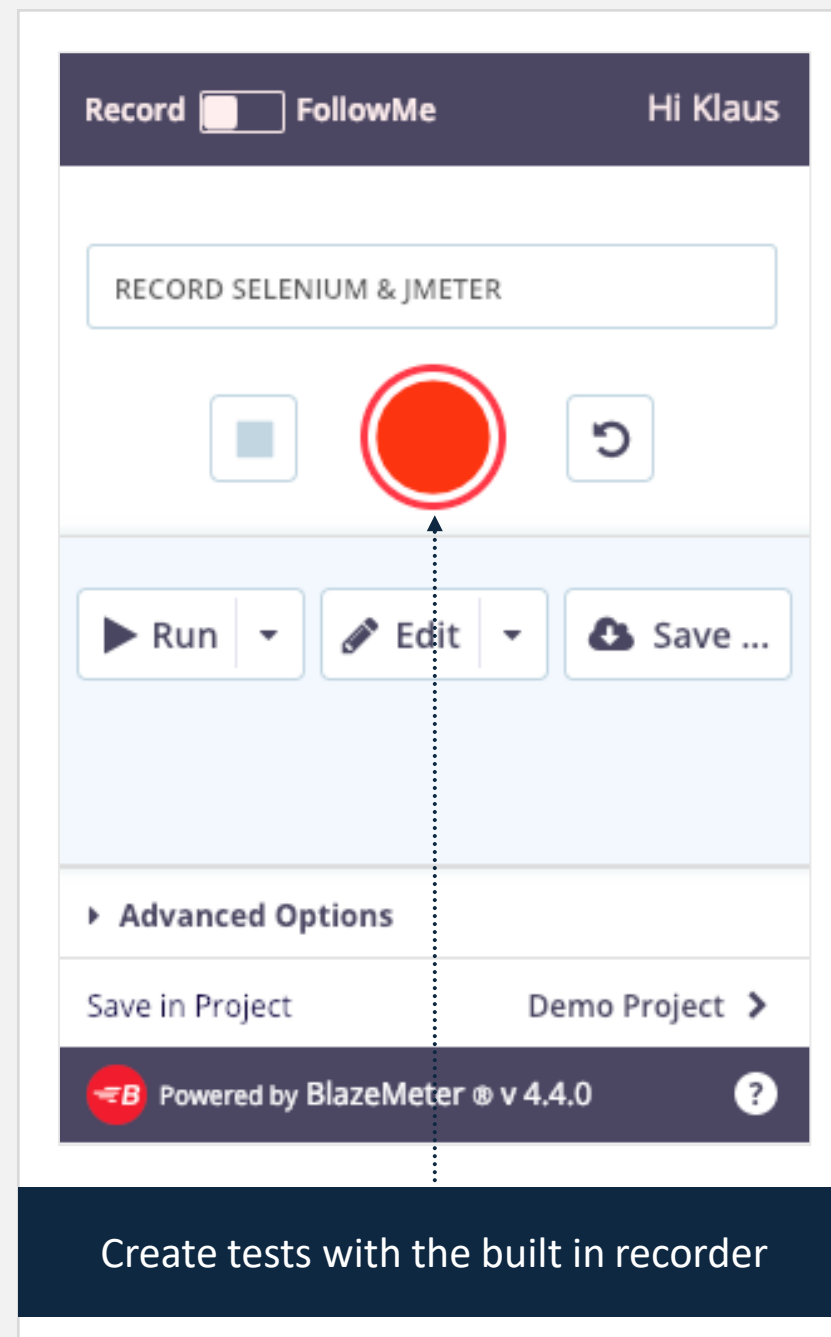

# Built On Open Source for Developers

- Supports all major open source frameworks
- API & GUI driven, integrated with IDEs of choice
- Seamless integrations with CI/CD pipeline
- Instant TTV: sign up & start using right away
- API Testing with built-in diagnostics, API monitoring
- Test data and virtual services
- Test early and often with easy access to mobile, web, functional, load and integration testing

## 2. One Recording, **Multiple Tests**

Record  FollowMe Hi Klaus

RECORD SELENIUM & JMETER

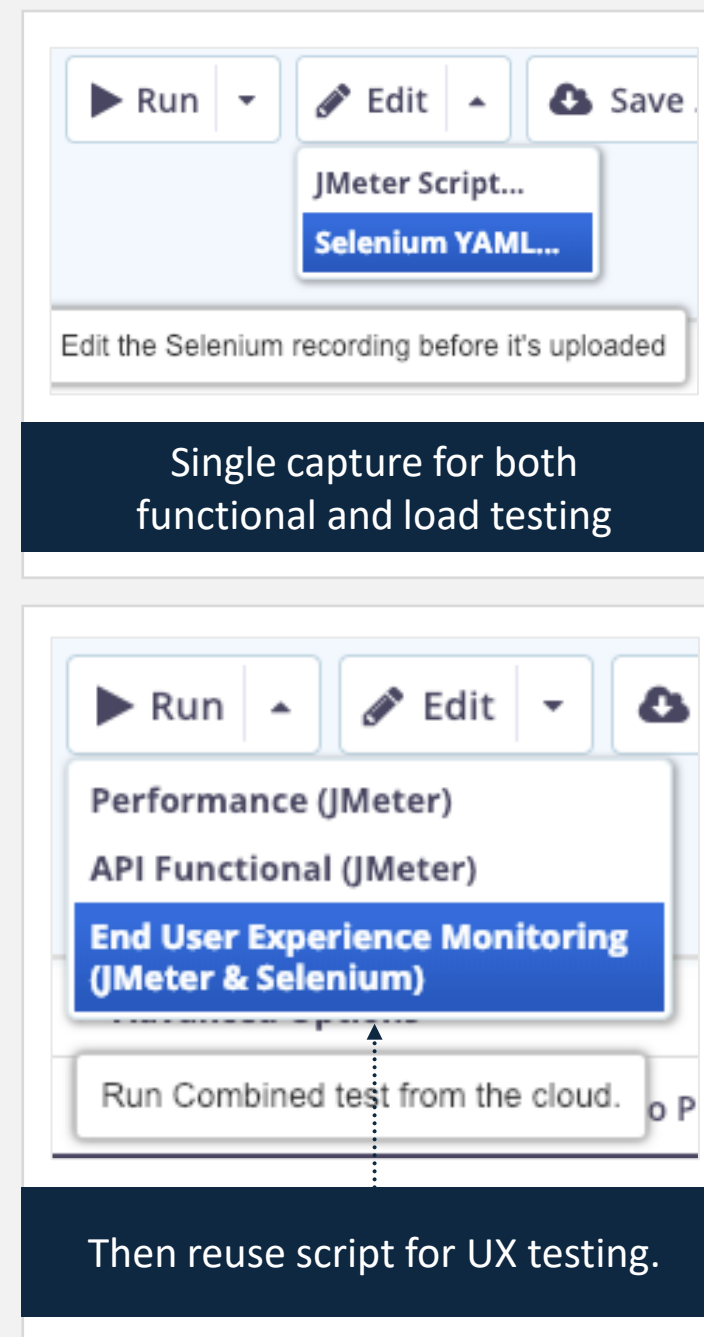

Run Edit Save ...

Advanced Options

Save in Project Demo Project >

Powered by BlazeMeter v 4.4.0

Create tests with the built in recorder

Run Edit Save

JMeter Script...  
Selenium YAML...

Edit the Selenium recording before it's uploaded

Single capture for both functional and load testing

Run Edit Save

Performance (JMeter)  
API Functional (JMeter)  
End User Experience Monitoring (JMeter & Selenium)

Run Combined test from the cloud.

Then reuse script for UX testing.

### **No scripting required.**

Create tests with the lightweight recorder.

### **One test for all.\***

One recording works for functional, load, and UX testing.

### **Save time.**

No need to create and maintain multiple recordings.

**Reduce maintenance time and complexity.**

# Web-Scale Performance and Load Testing

## Market-leading load and performance testing

100% open source compatible (JMeter, Selenium, Gatling, etc).

## Enterprise scale

Broadest geo distributed load generation (AWS, Azure, GCP, and/or behind firewall). Rich enterprise protocol support.

## Center of Excellence Transformation

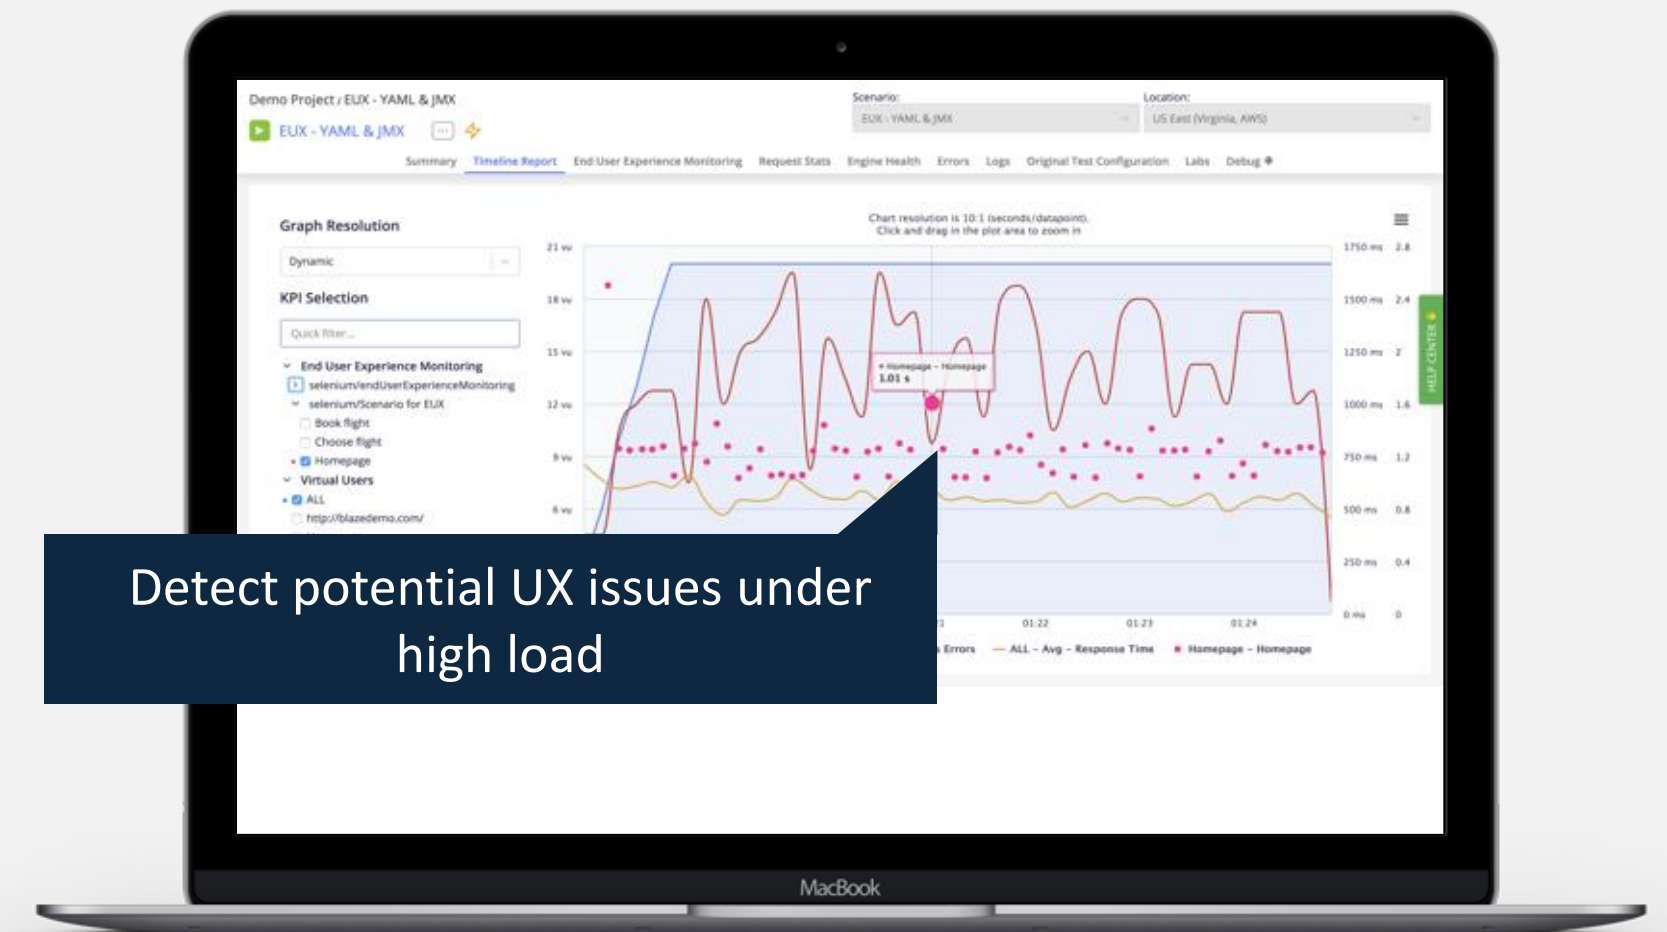

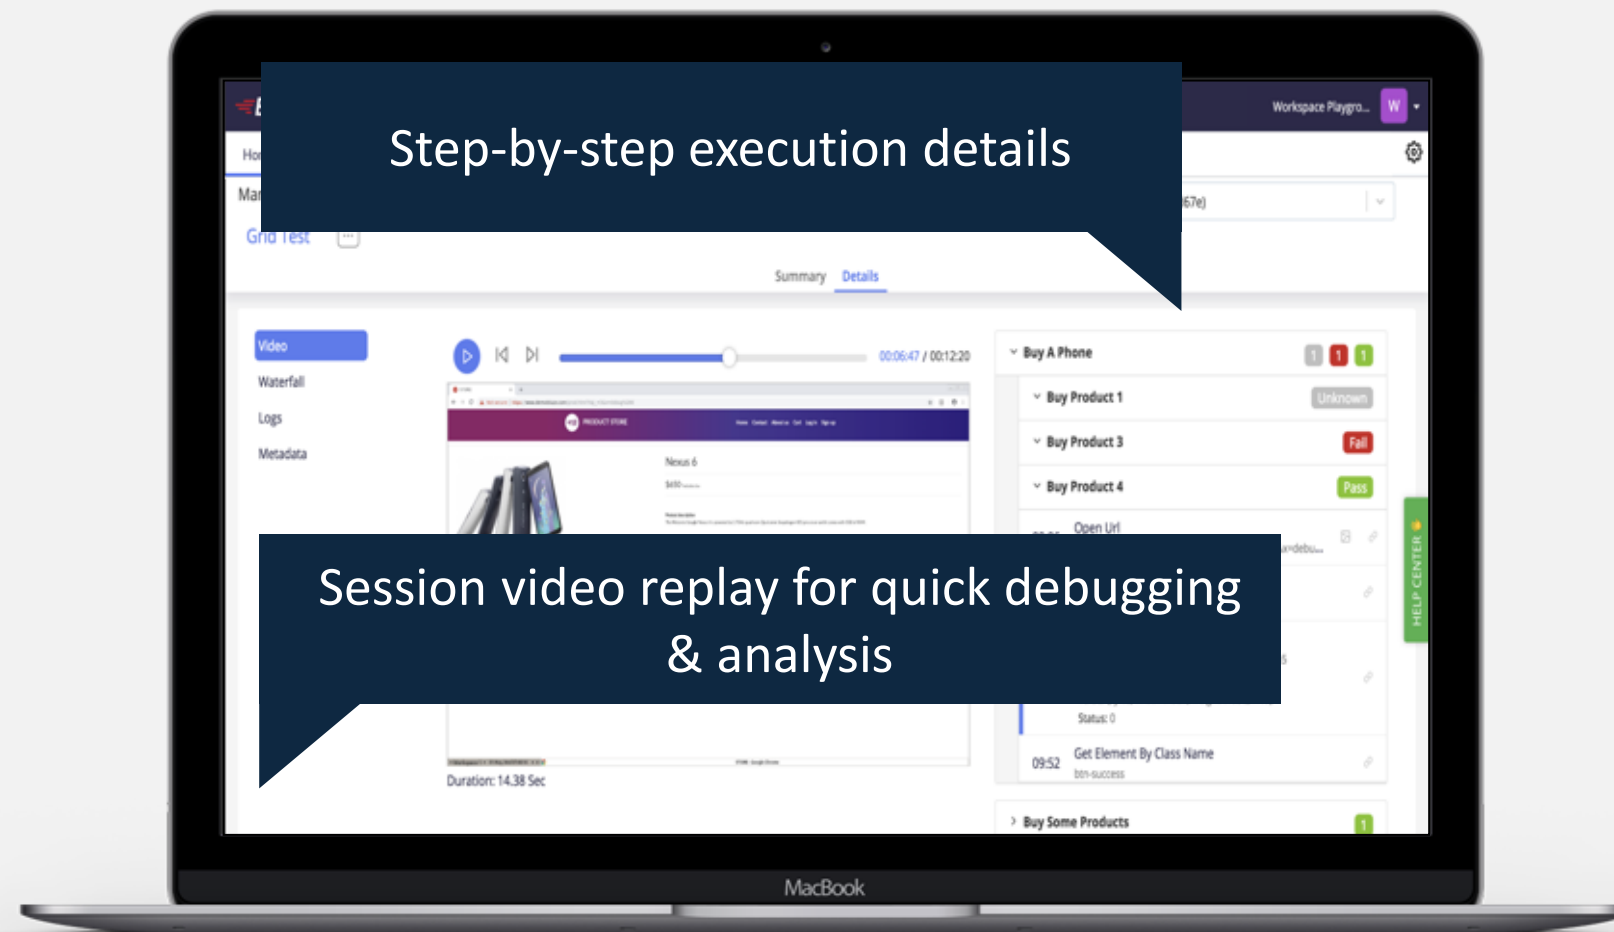

As code, UI, Load Runner Script Convertor.

Developer-friendly, shift-left leader

# User Experience Testing

## Test UX under real-world conditions in a single test run

Instantly understand how the UI performs under high load.

## Nothing to configure

Run together, see combined graphs and analytics. SaaS solution – click to set up and use.

## One recording

Creates tests for functional UI and performance.

**Instantly see combined results from a single test run.**

# API Testing and Monitoring

## Create in minutes

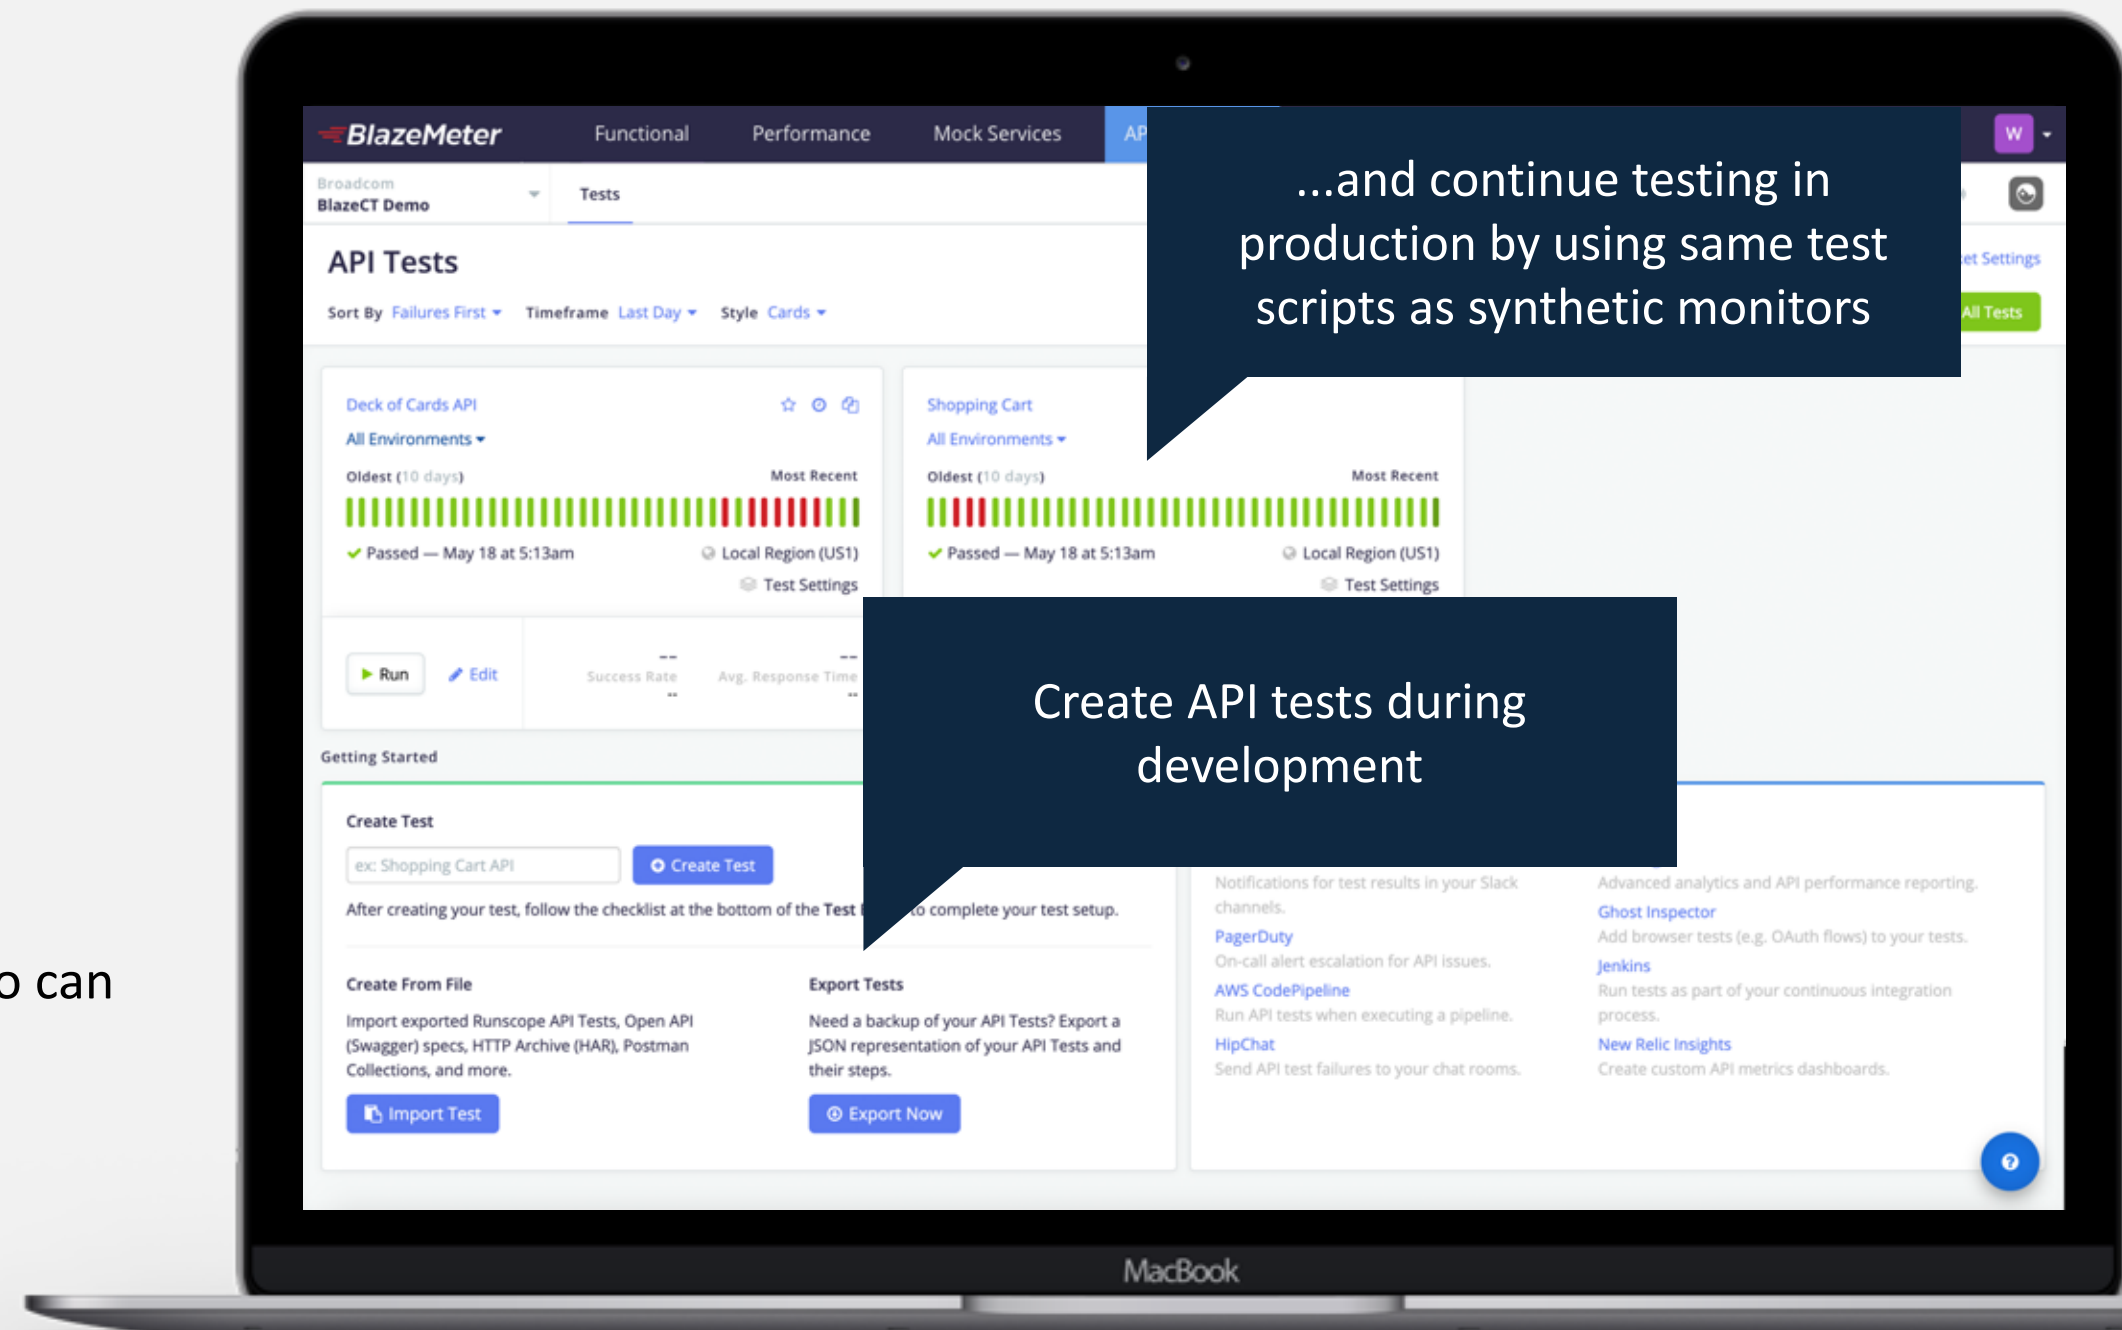

Dev creates API tests during development.

## Use same script for monitoring

Agile teams use the same script to monitor service in production.  
Ensure a ★★★★★ customer experience.

## Complete feedback loop

Everyone owns quality, faster MTTR, instantly know the expert who can address any issues.

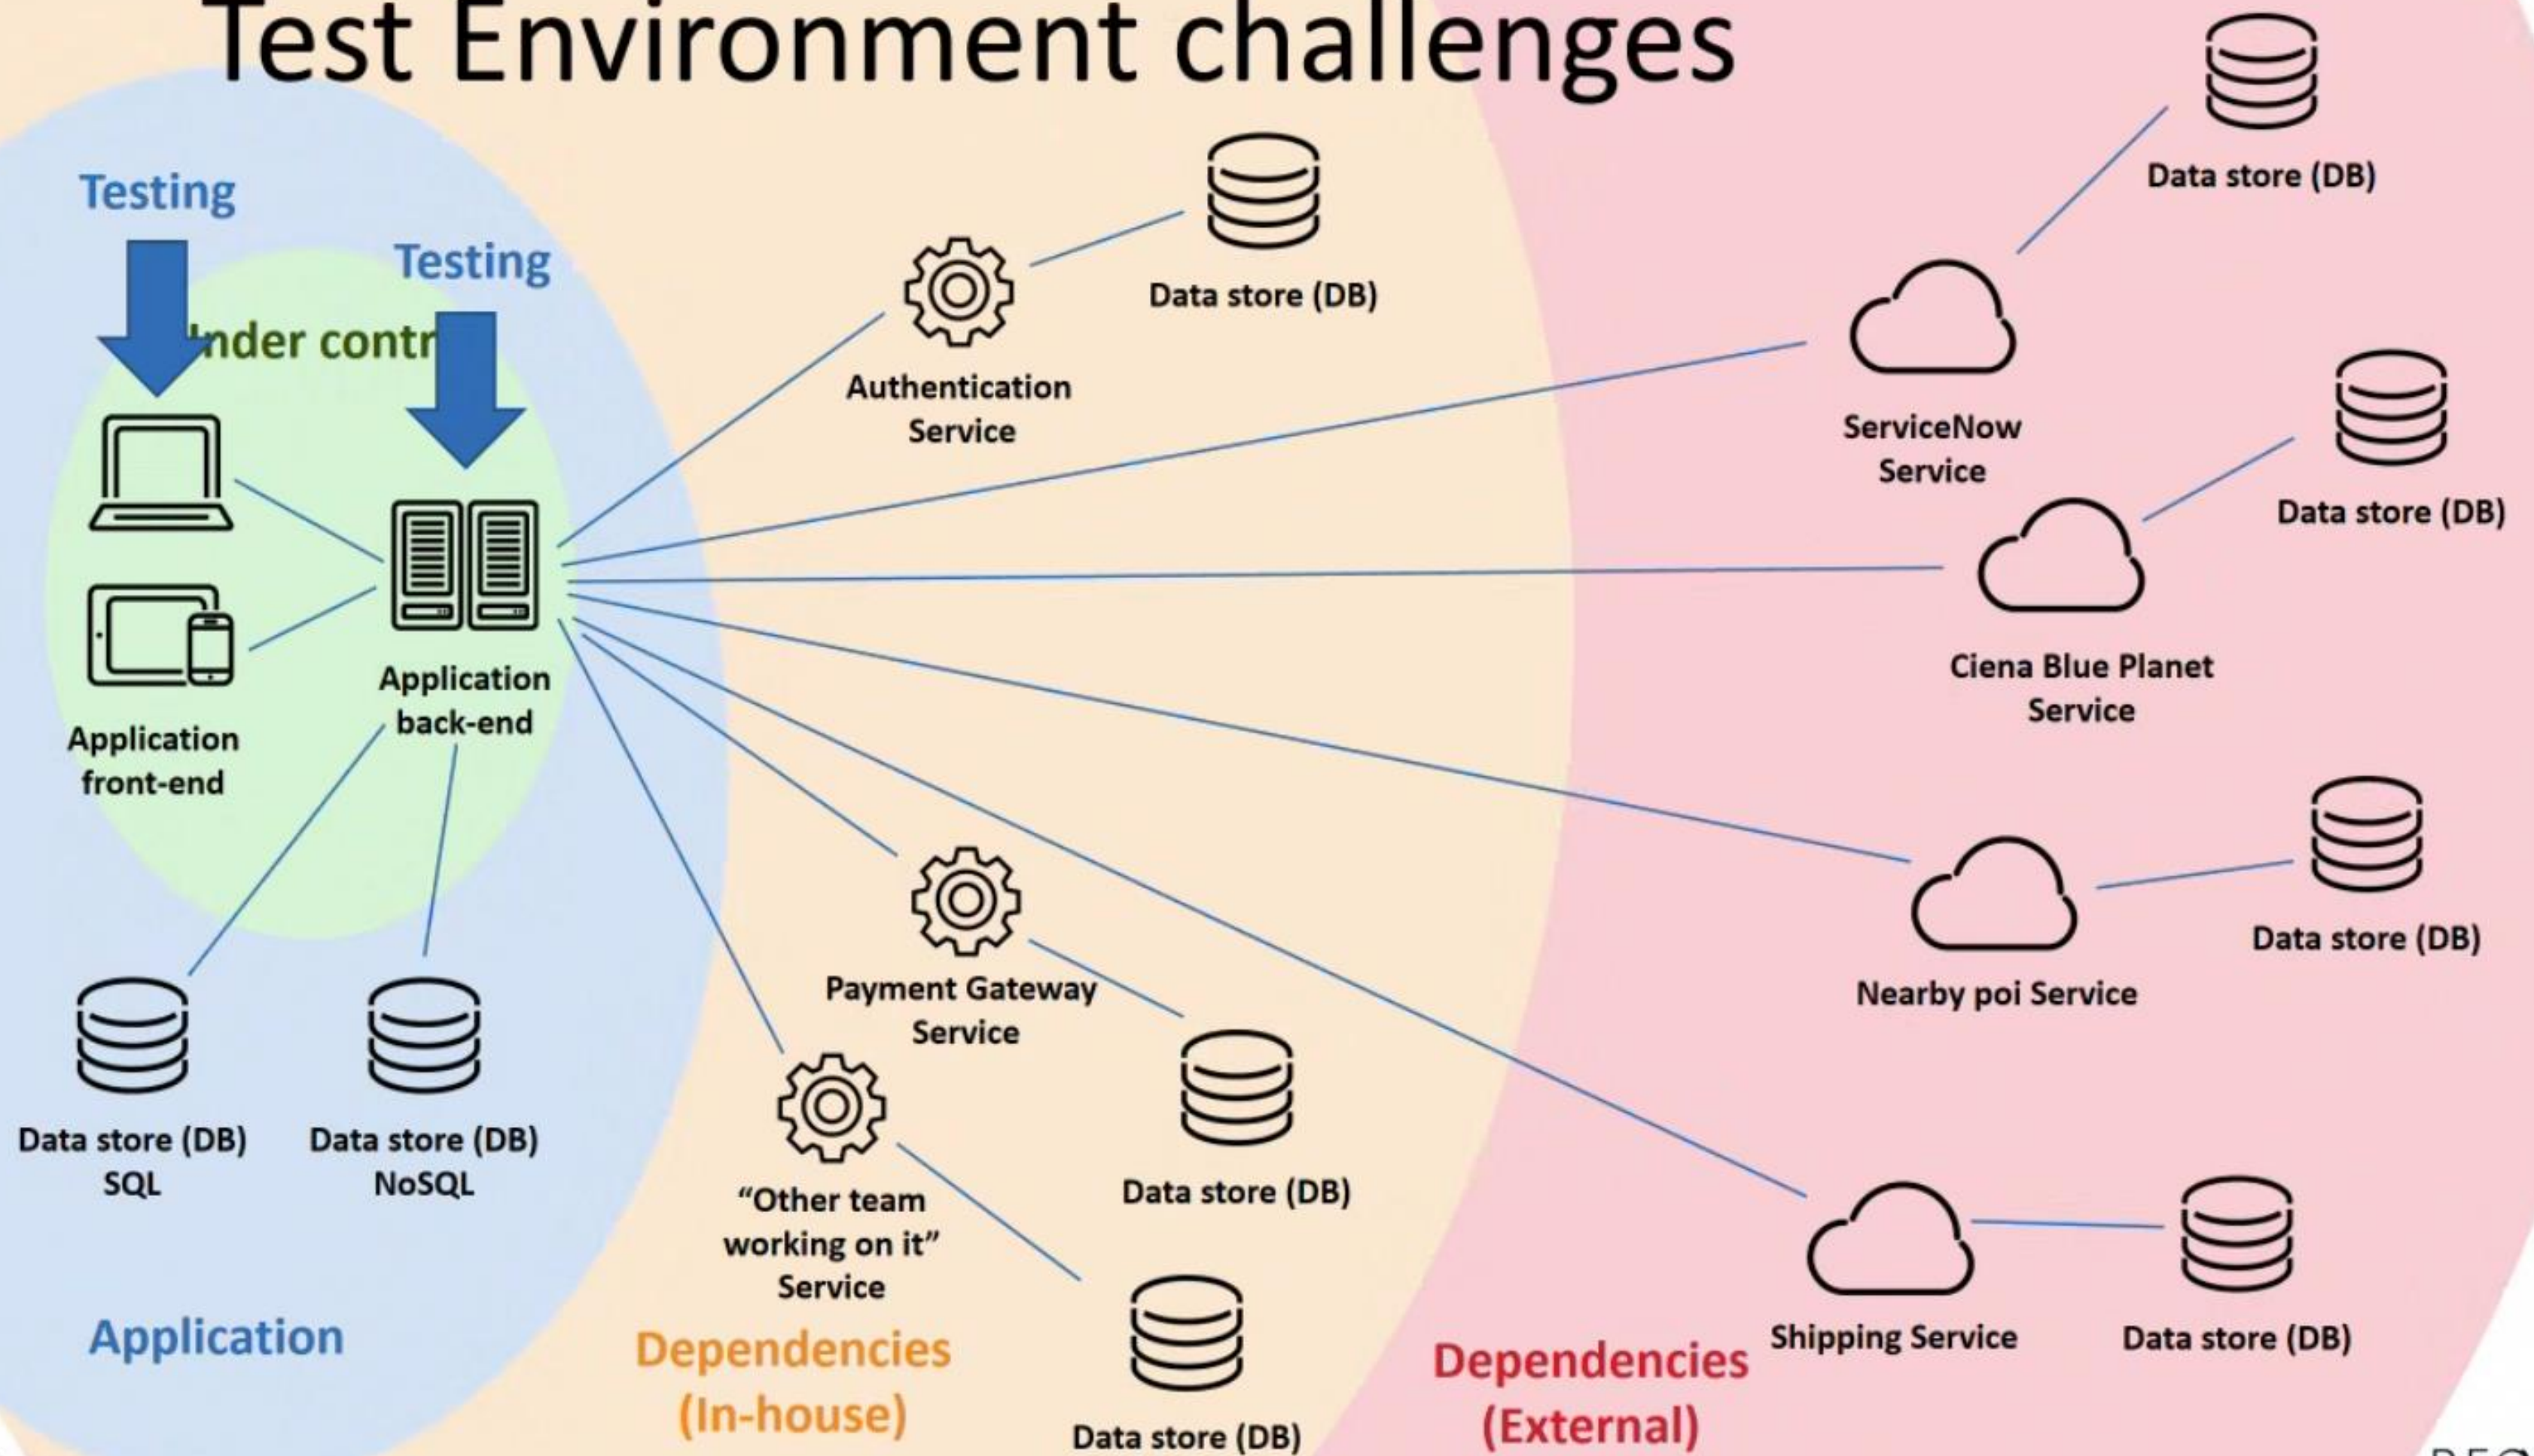

...and continue testing in production by using same test scripts as synthetic monitors

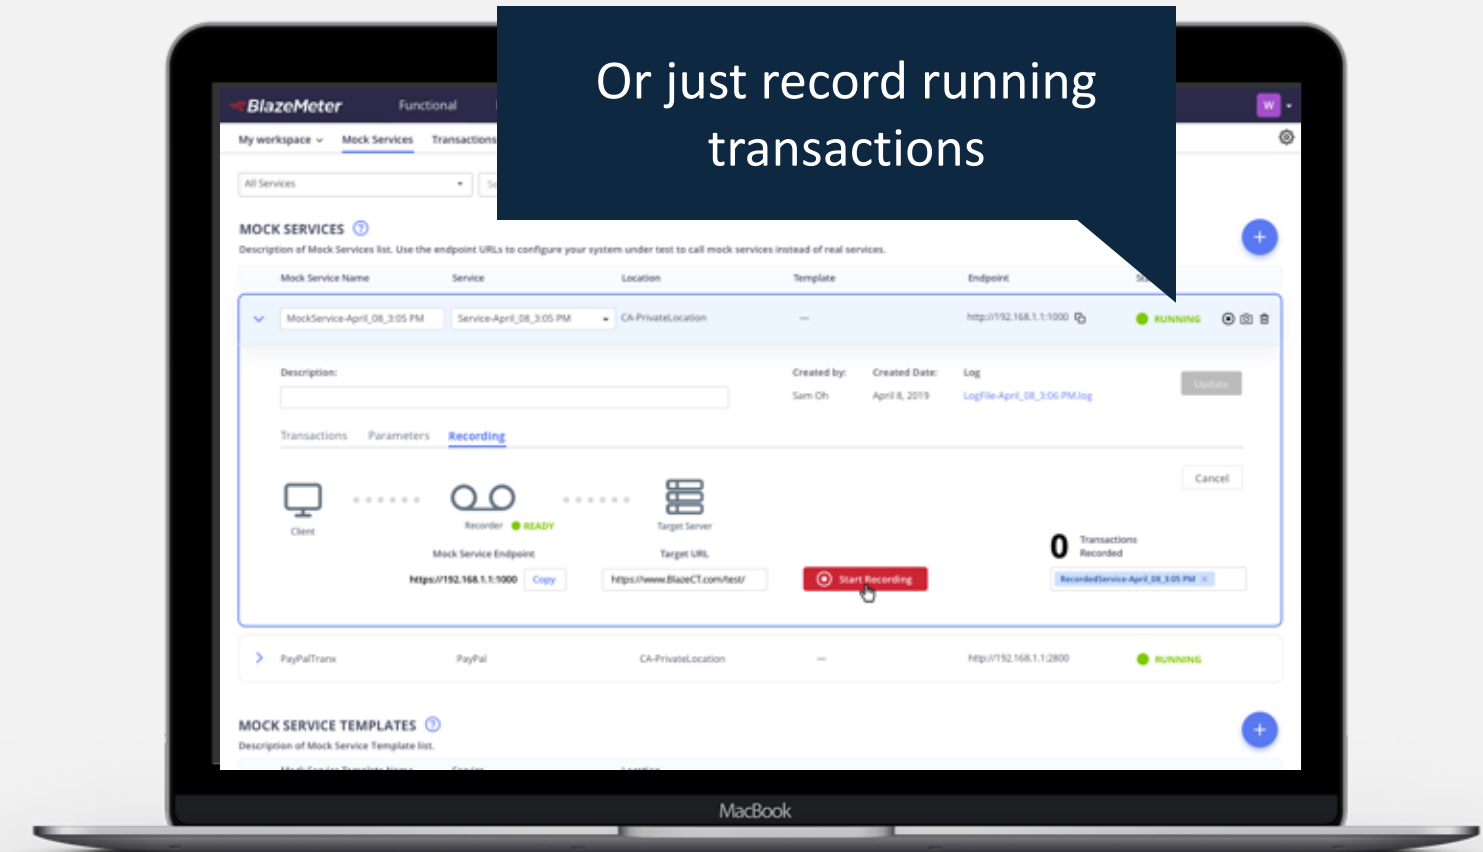

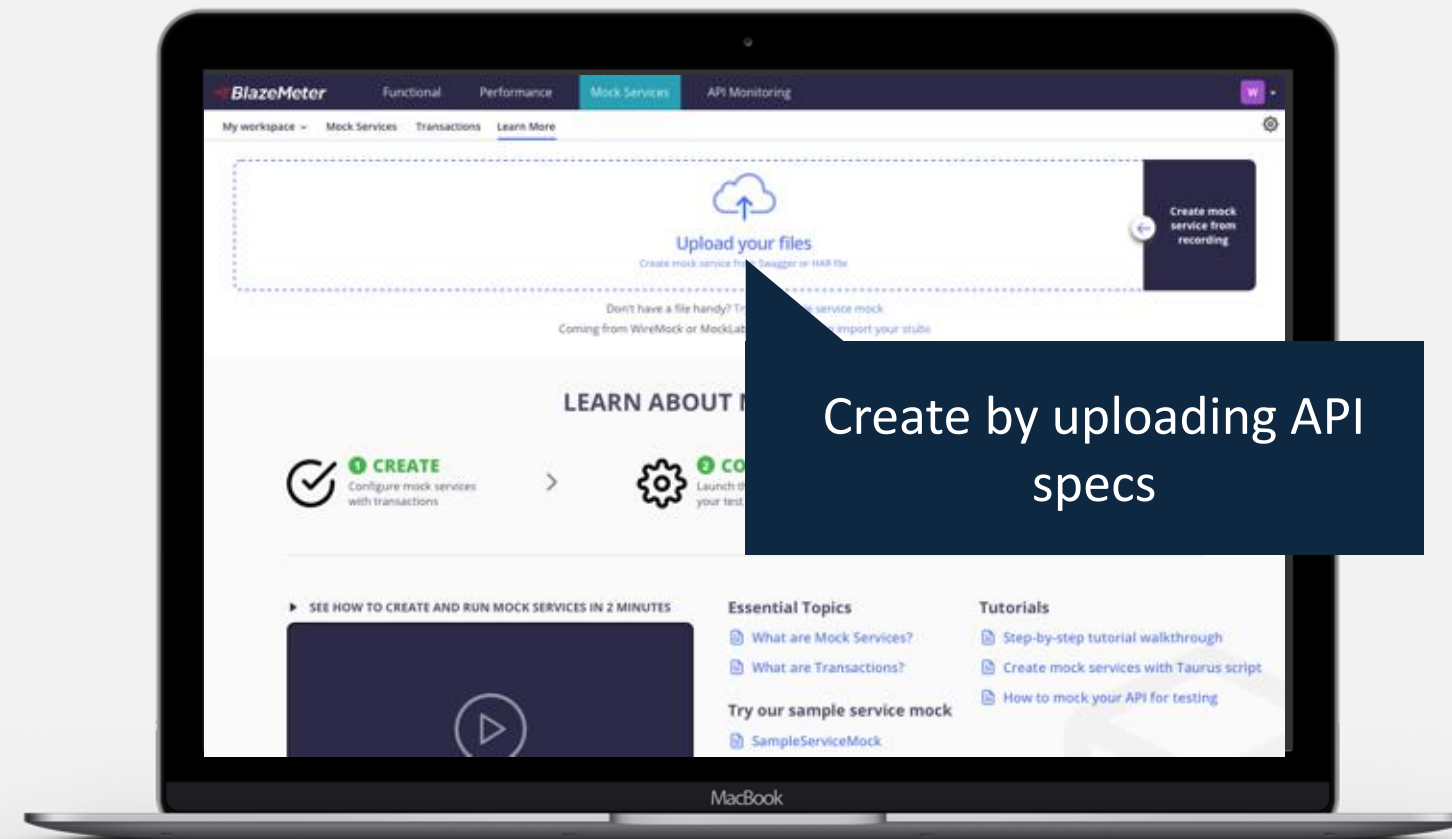

Create API tests during development

Agile teams own quality from dev through production.

# Test Environment challenges

# Eliminate Environment Delays with Virtual Services

## Empower developers to create & collaborate

Create with open source (eg Wirevirtual), API specs (eg Swagger & .har files), no code UI. Share in virtual catalogue.

## Virtual Services > Mocks

Test negative responses, poor performance, random output, happy path.

## Run

Launch manually through APIs, and through self-defined tests.

**Eliminate delays in test set up, test completely for better quality.**

# Test Data **for every test**

## Compliant test data on demand

Create synthetic test data from inside BlazeMeter

## Use across any test, service, or SUT

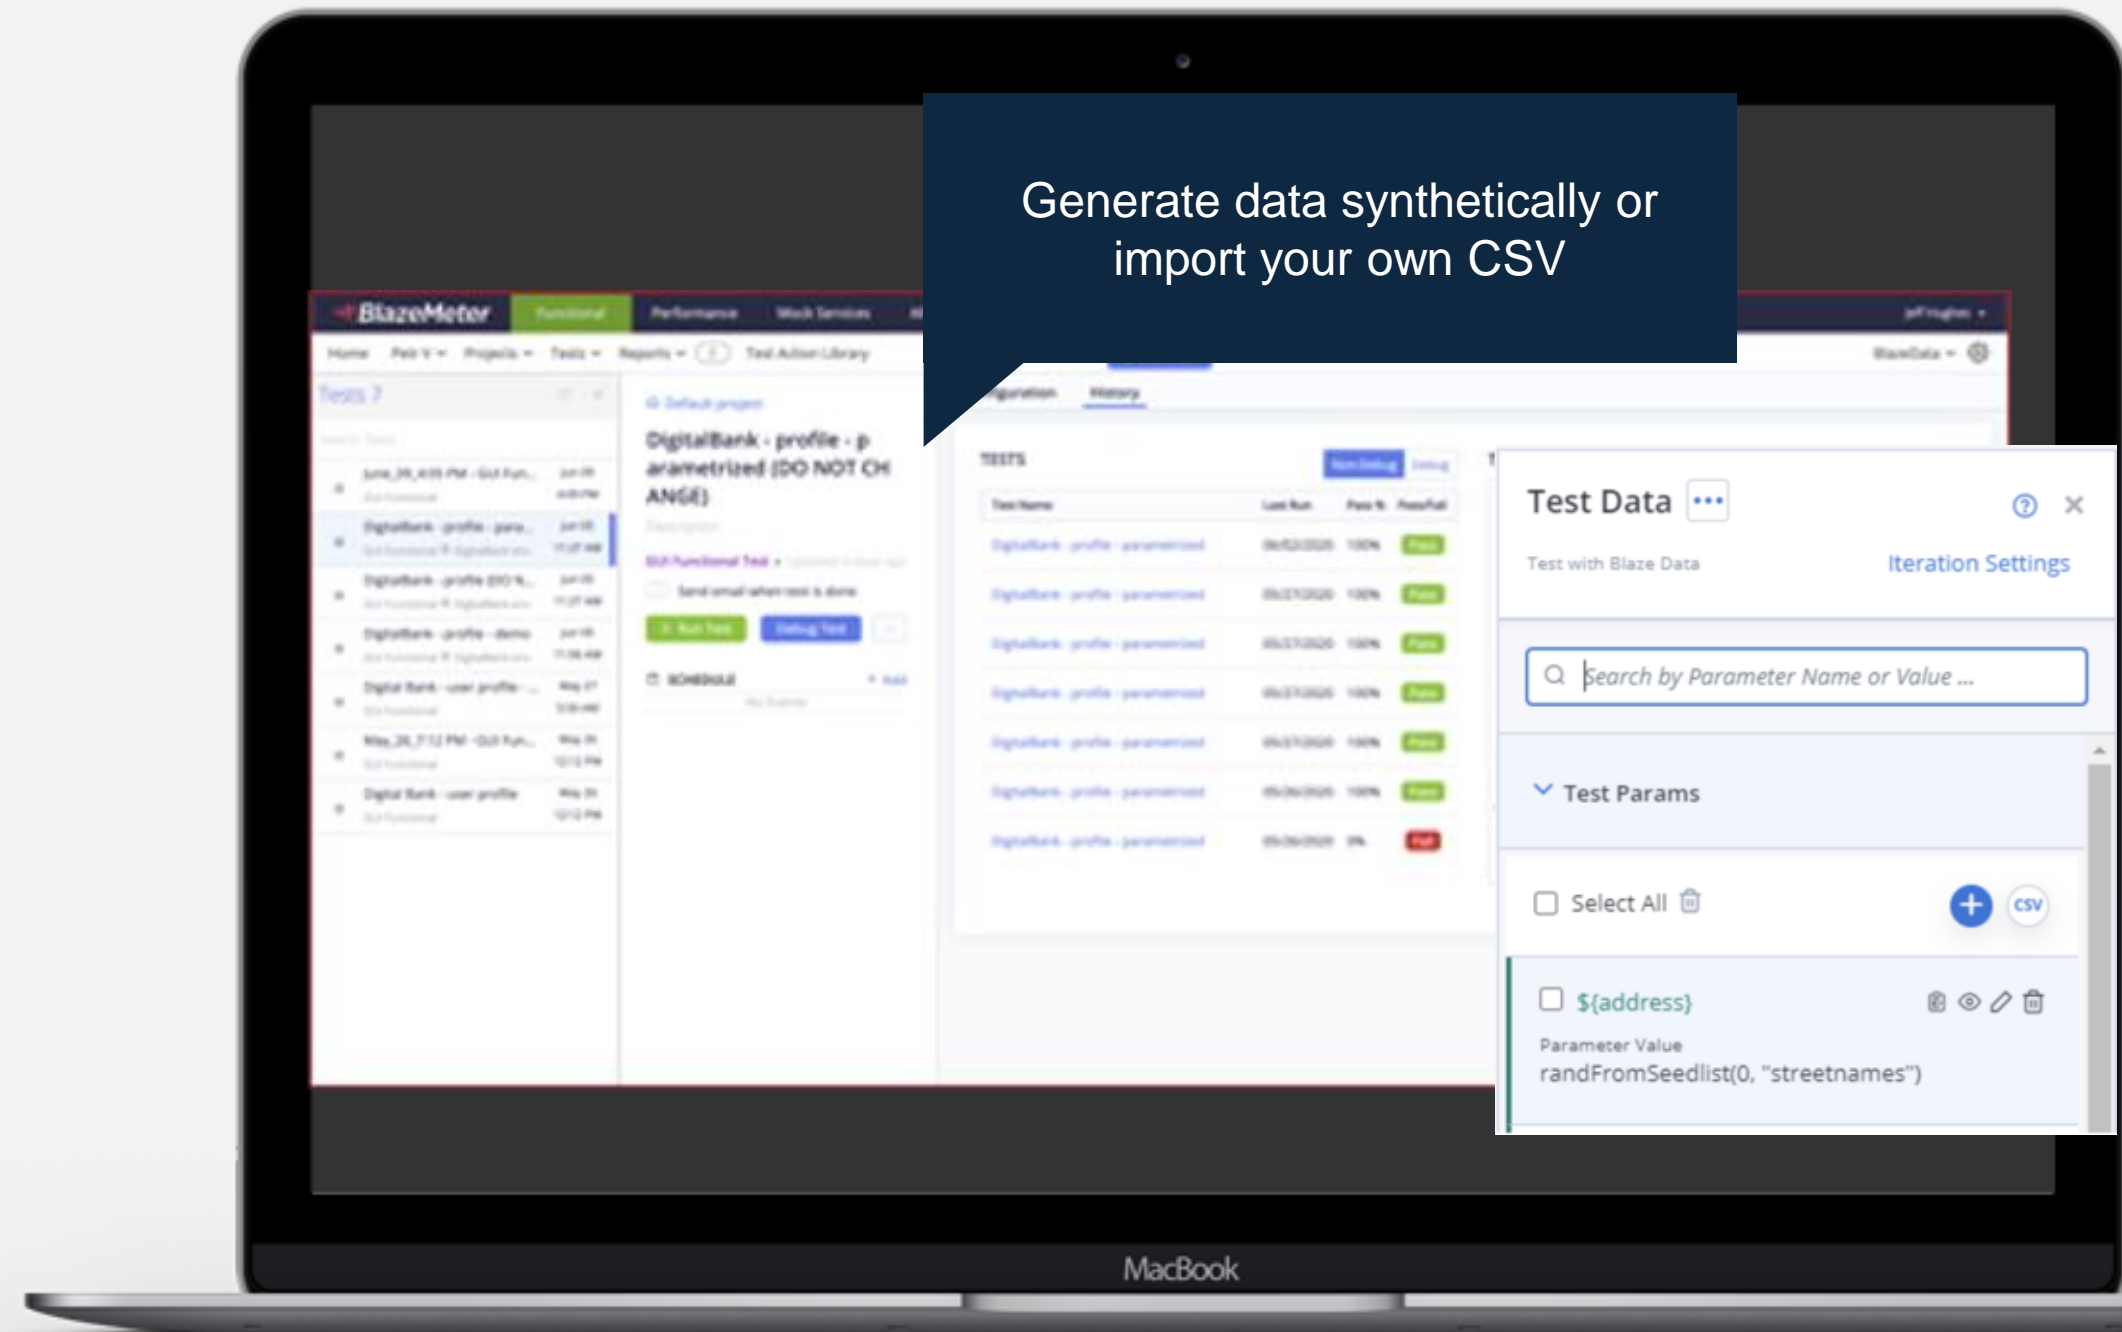

Test data stays synchronized across every test type.

## Reuse test data

Reuse data for any test

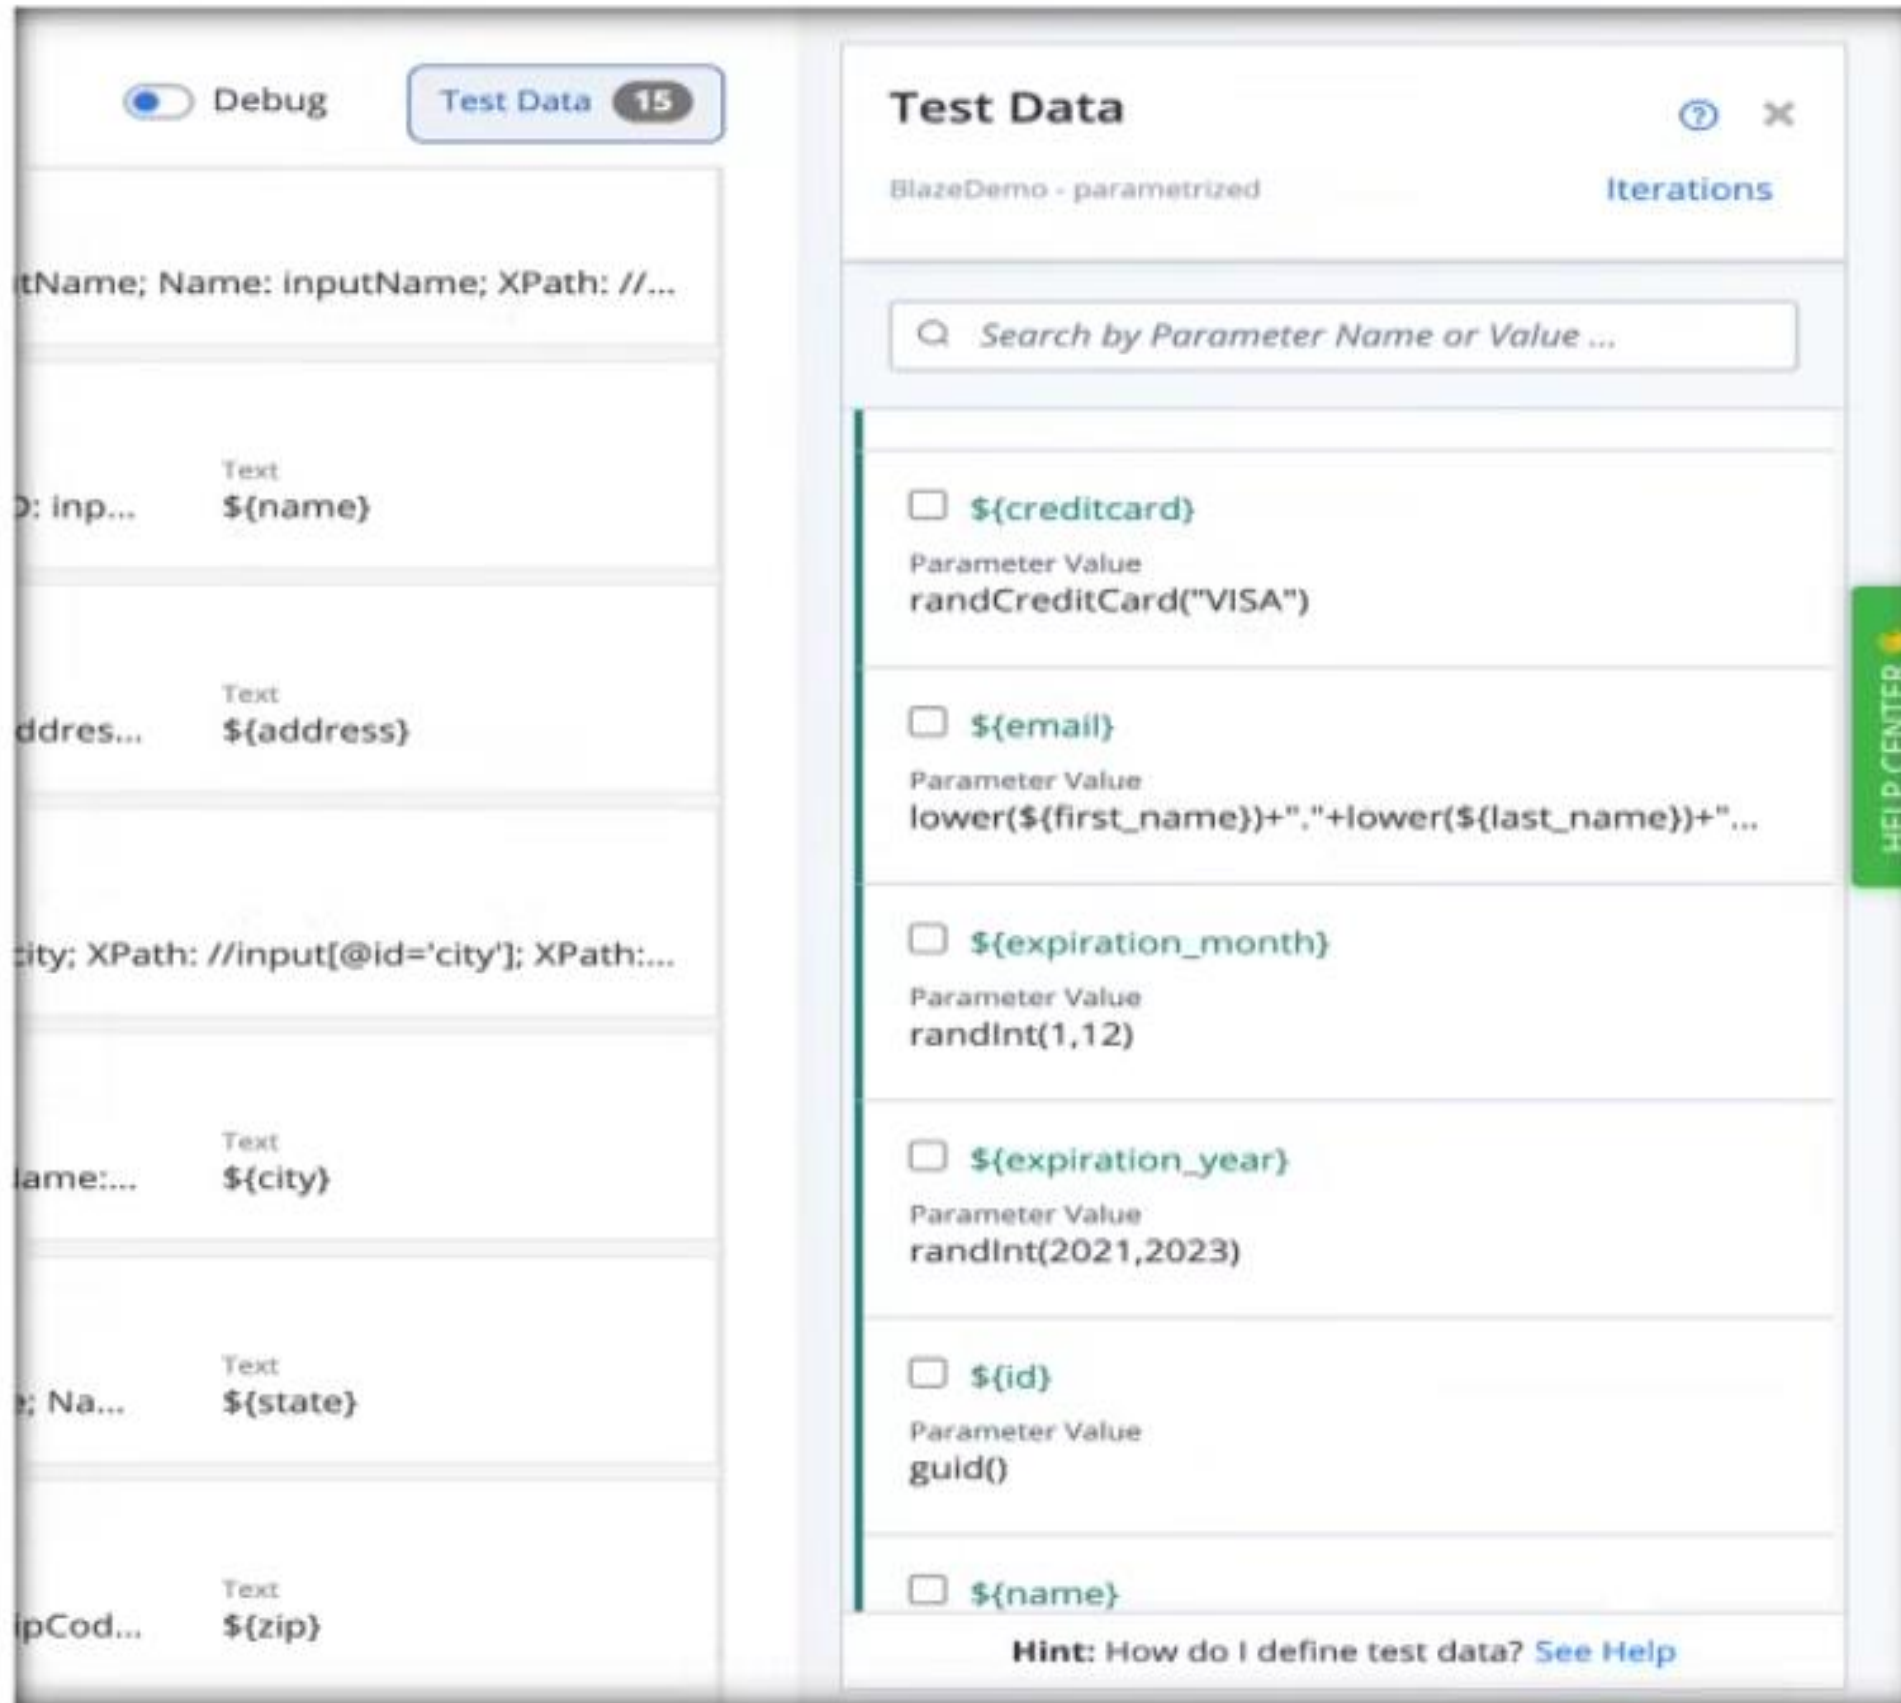

## Shift-left test data

Agile teams can create their own test data

**Address the #1 challenge to continuous testing with test data on demand.**

# BlazeMeter Test Data

The screenshot displays the BlazeMeter Test Data interface. On the left, a list of test data items is shown, including parameters like `inputName`, `name`, `address`, `city`, `state`, and `zip`. The right panel, titled "Test Data", shows a search bar and a list of parameters with their values and generation functions:

- `creditcard`: Parameter Value `randCreditCard("VISA")`
- `email`: Parameter Value `lower(${first_name})+"."+lower(${last_name})+"..."`
- `expiration_month`: Parameter Value `randInt(1,12)`
- `expiration_year`: Parameter Value `randInt(2021,2023)`
- `id`: Parameter Value `guid()`
- `name`: Parameter Value `guid()`

A "Hint" at the bottom suggests: "How do I define test data? See Help".

Do not waste time with manufacturing test data by hand (manually) – **focus on testing**

Get comprehensive test data with desired variety – **better and more robust tests**

Reuse data between **tests** – **leverage collaboration**

Ensure test data consistency – **simplify test environment setup**

# Test Data – data-driven Mock Services

TRANSACTIONS (25) ? 🗑️ ↩️

List of Transactions available for Mock Services creation.

| ID | Transaction Name      | Method | Request URL      | Response Status | Service        | Tags    |
|----|-----------------------|--------|------------------|-----------------|----------------|---------|
| 1  | Example https request | GET    | /pub/WWW/.....   | 200             | User Directory | Users 1 |
| 2  | Example get request   | GET    | /estimates/price | 200             | User Directory | Users 1 |

|   |                   |     |                |     |                |         |
|---|-------------------|-----|----------------|-----|----------------|---------|
| 3 | Show user details | GET | /authorization | 200 | User Directory | Users 1 |
|---|-------------------|-----|----------------|-----|----------------|---------|

**firstname: String** ↻

Parameter Value  
randlov(en\_firstnames)

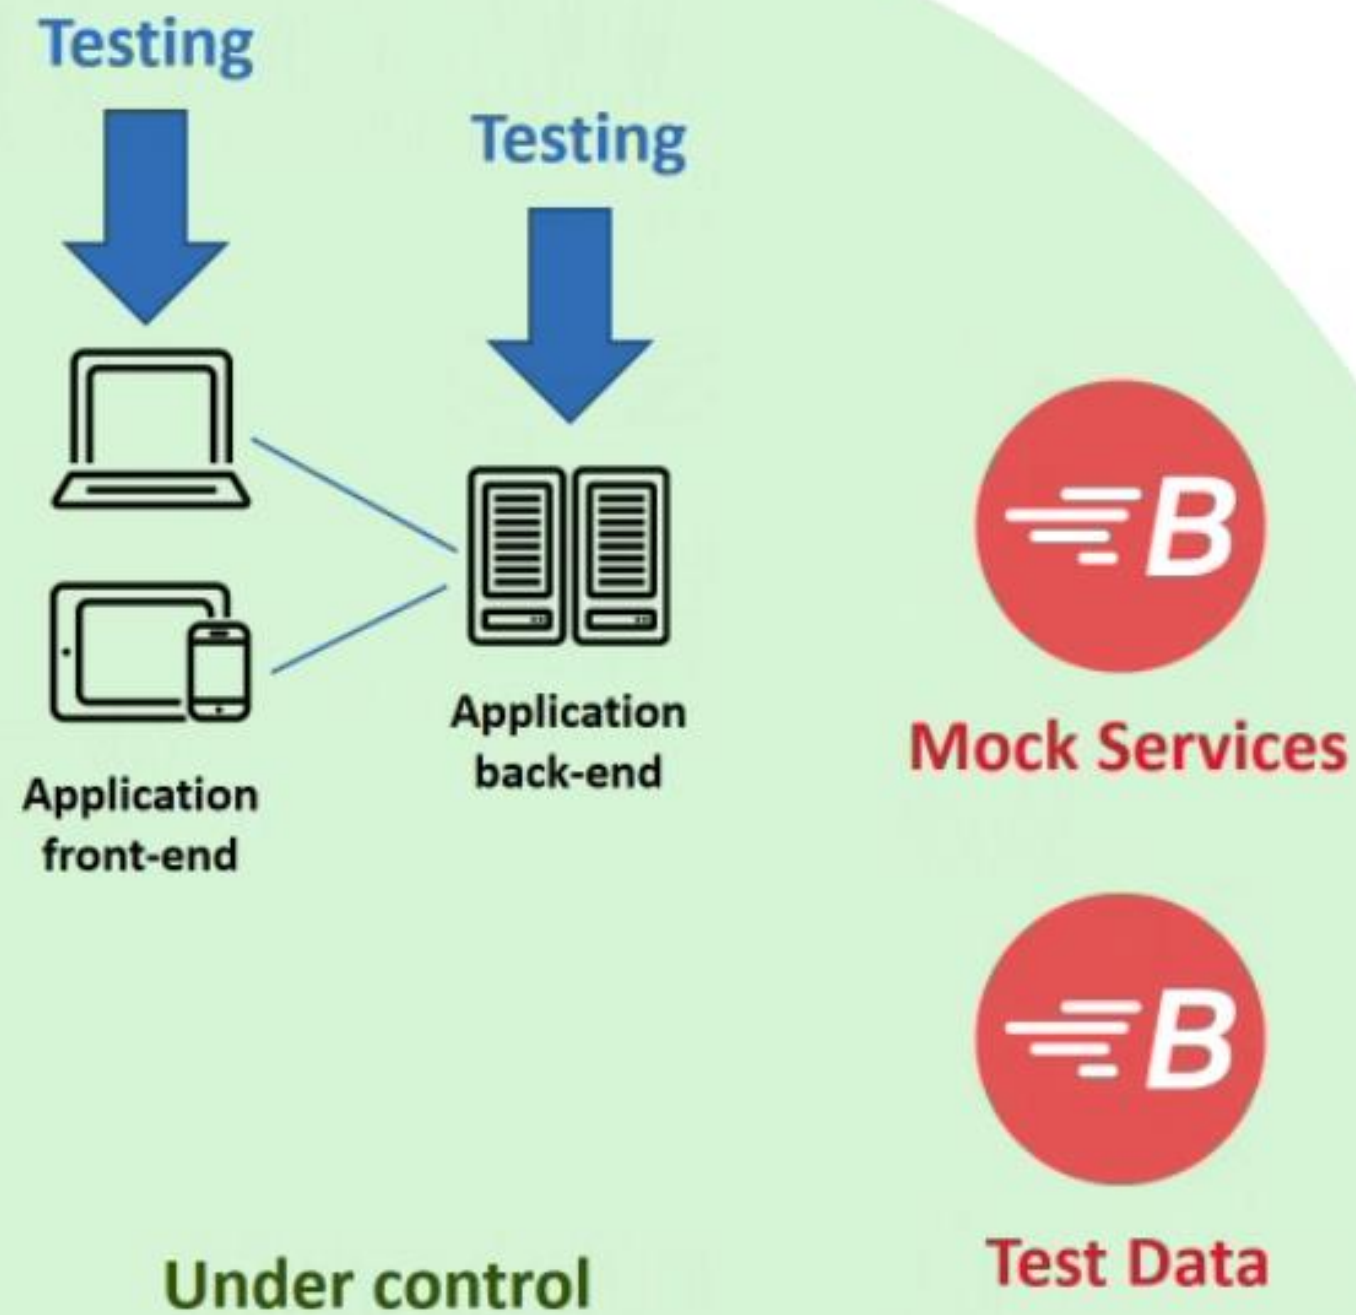

**lastname: String**

Parameter Value  
randlov(en\_lastnames)

Build data model for services that will be mocked/virtualized.

Define various data sets to simulate different service behavior according to specific testing needs.

# Typical App Environment Architecture + BlazeMeter

Get test data challenges and dependency constraints of tests under control with **BlazeMeter Test Data & Mock Services**

- Generate, reuse, access test data when needed
- Replace the real dependencies with virtual/mock ones

## Case Study : Malaysian Government

### High Traffic Demands

Government applications experience surges in traffic, especially during high-demand periods

### Performance Bottlenecks

Applications often encounter performance degradation under high loads, impacting service quality

### Limited Testing Capabilities:

Traditional testing methods did not provide real-world simulations or extensive load testing, resulting in unpredictable performance issues post-deployment.

### Compliance and Data Security

Testing in a government environment requires strict adherence to data protection laws and cybersecurity standards.

## Case Study: Healthcare Sector

35% Decrease in Inter-department Registry Bottleneck Occurrence

## Case Study : Malaysian Government

Solution?

 **BlazeMeter**  
by Perforce

### Simulating High User Loads

BlazeMeter replicates real-world scenarios, allowing agencies to stress-test applications against user load spikes

### End-to-End Testing

The platform provides functional, performance, and API testing in a unified environment

### Cloud-Based Scalability

BlazeMeter's cloud-based architecture enables massive scaling without requiring on-premises infrastructure investments

### Enhanced Security

Data protection and compliance features ensure that testing adheres to local and international standards

# Solution Set

DC Scalability & Performance

Real User Experience on Mobile & Desktop

**Delphix**  
by Perforce  
Production-based Data Management  
(Masking, Compliance)

User Experience on Real Devices, While Server is Under Load

**WORKSOFT**<sup>®</sup>  
Packaged Application Testing  
(SAP, Oracle, Salesforce etc)
