**Accelerated Testing |
Deliver Higher Quality Software**

Test Automation made for Enterprises

Test automation that's faster, easier, and scales across your entire team and tech stack. Built for enterprises, designed for QA teams.

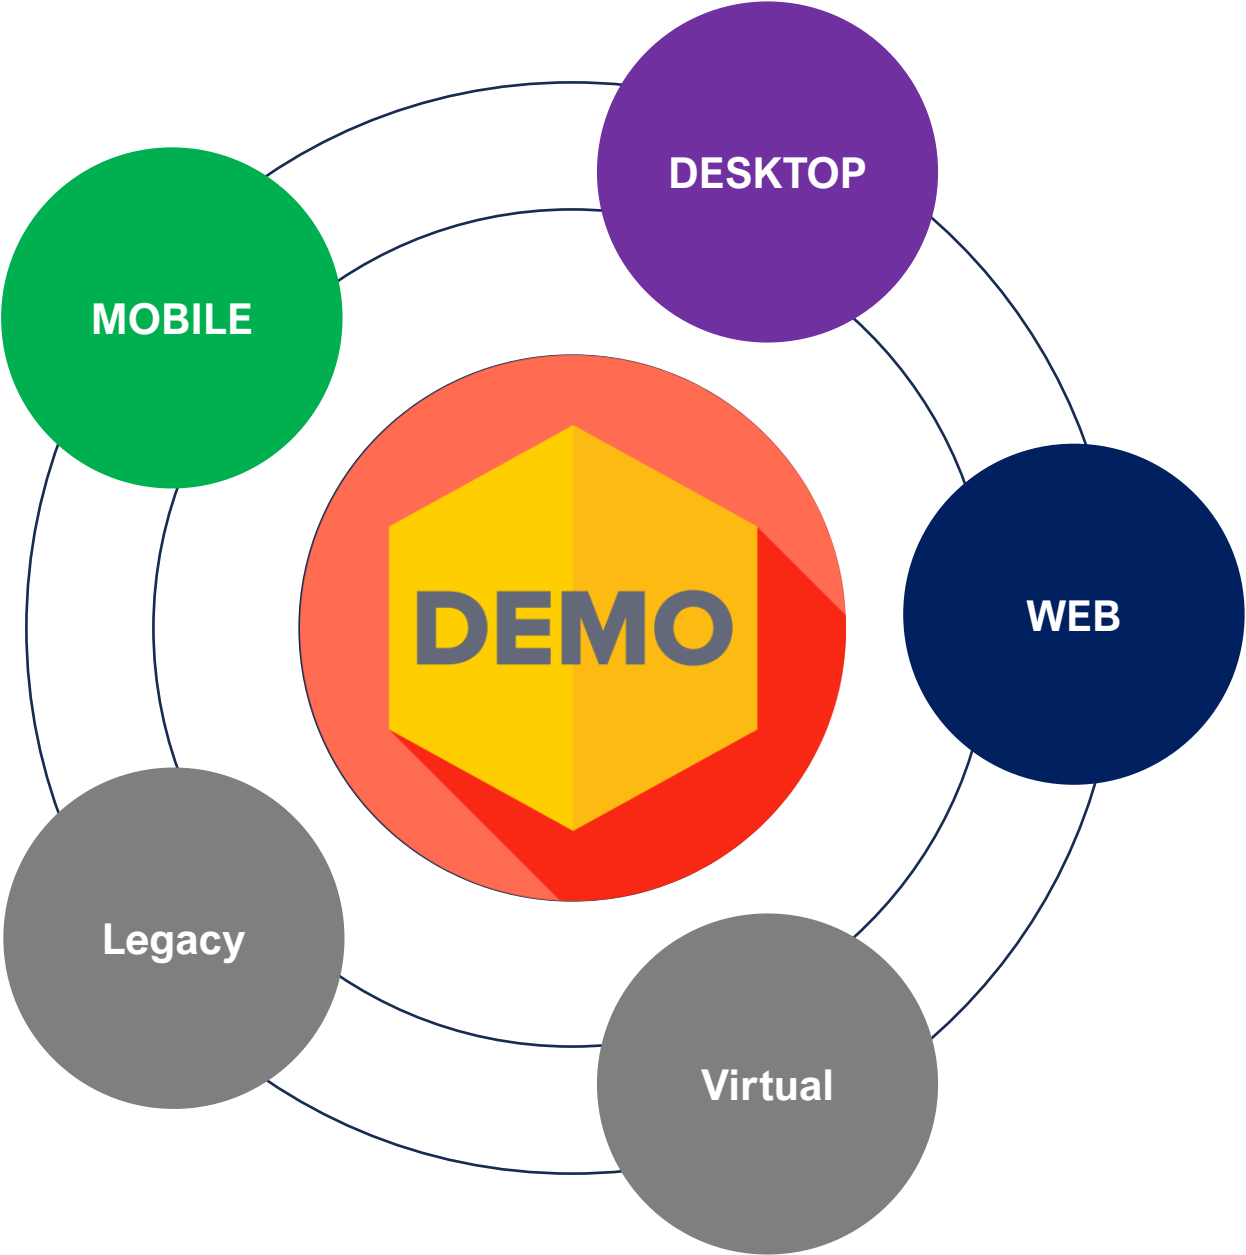

A beautifully simple way to automate complex tests

A universal, visual automation language that the entire organization can use and understand. From business users to QA teams, there are people across your organization who know precisely what processes to test. But, they don't necessarily have the technical or coding expertise traditionally required to automate them.

Automation in action

1. End-to-end testing across complex IT environments
2. Continuous testing with plugins to existing CI/CD pipelines
3. Regression and functional UI testing
4. Validate SaaS and packaged application updates and customizations
5. Intelligent building blocks that handle complex logic in the background.
6. Schedule flows to run, on-demand, in intervals, or at one time.
7. Reuse components, reduce workload
8. Start-of-day checks for business-critical processes

Unlock a new mindset for test automation

Don't just take our word for it...

→ Improve time to market

“With Leapwork we've been able to **speed up time to market.**”

Raphael Viard
Information Officer HPS

→ Improve productivity and operational efficiency

“The pace you can automate is astounding and blows the competition out of the water.”

Lawrence Williams
Head of Quality Assurance

→ Ensure business continuity

“Thanks to Leapwork we've been able to move up the maturity scale by focusing on value creation, less technical debt, and more drivers that'll change our organization.”

Dan Madden
Director CRM

→ Improve customer journey experience (external customers)

“Leapwork has helped build our confidence in the releases that we send out to our customers and, in turn, it's also increased the confidence that our customers have in US.”

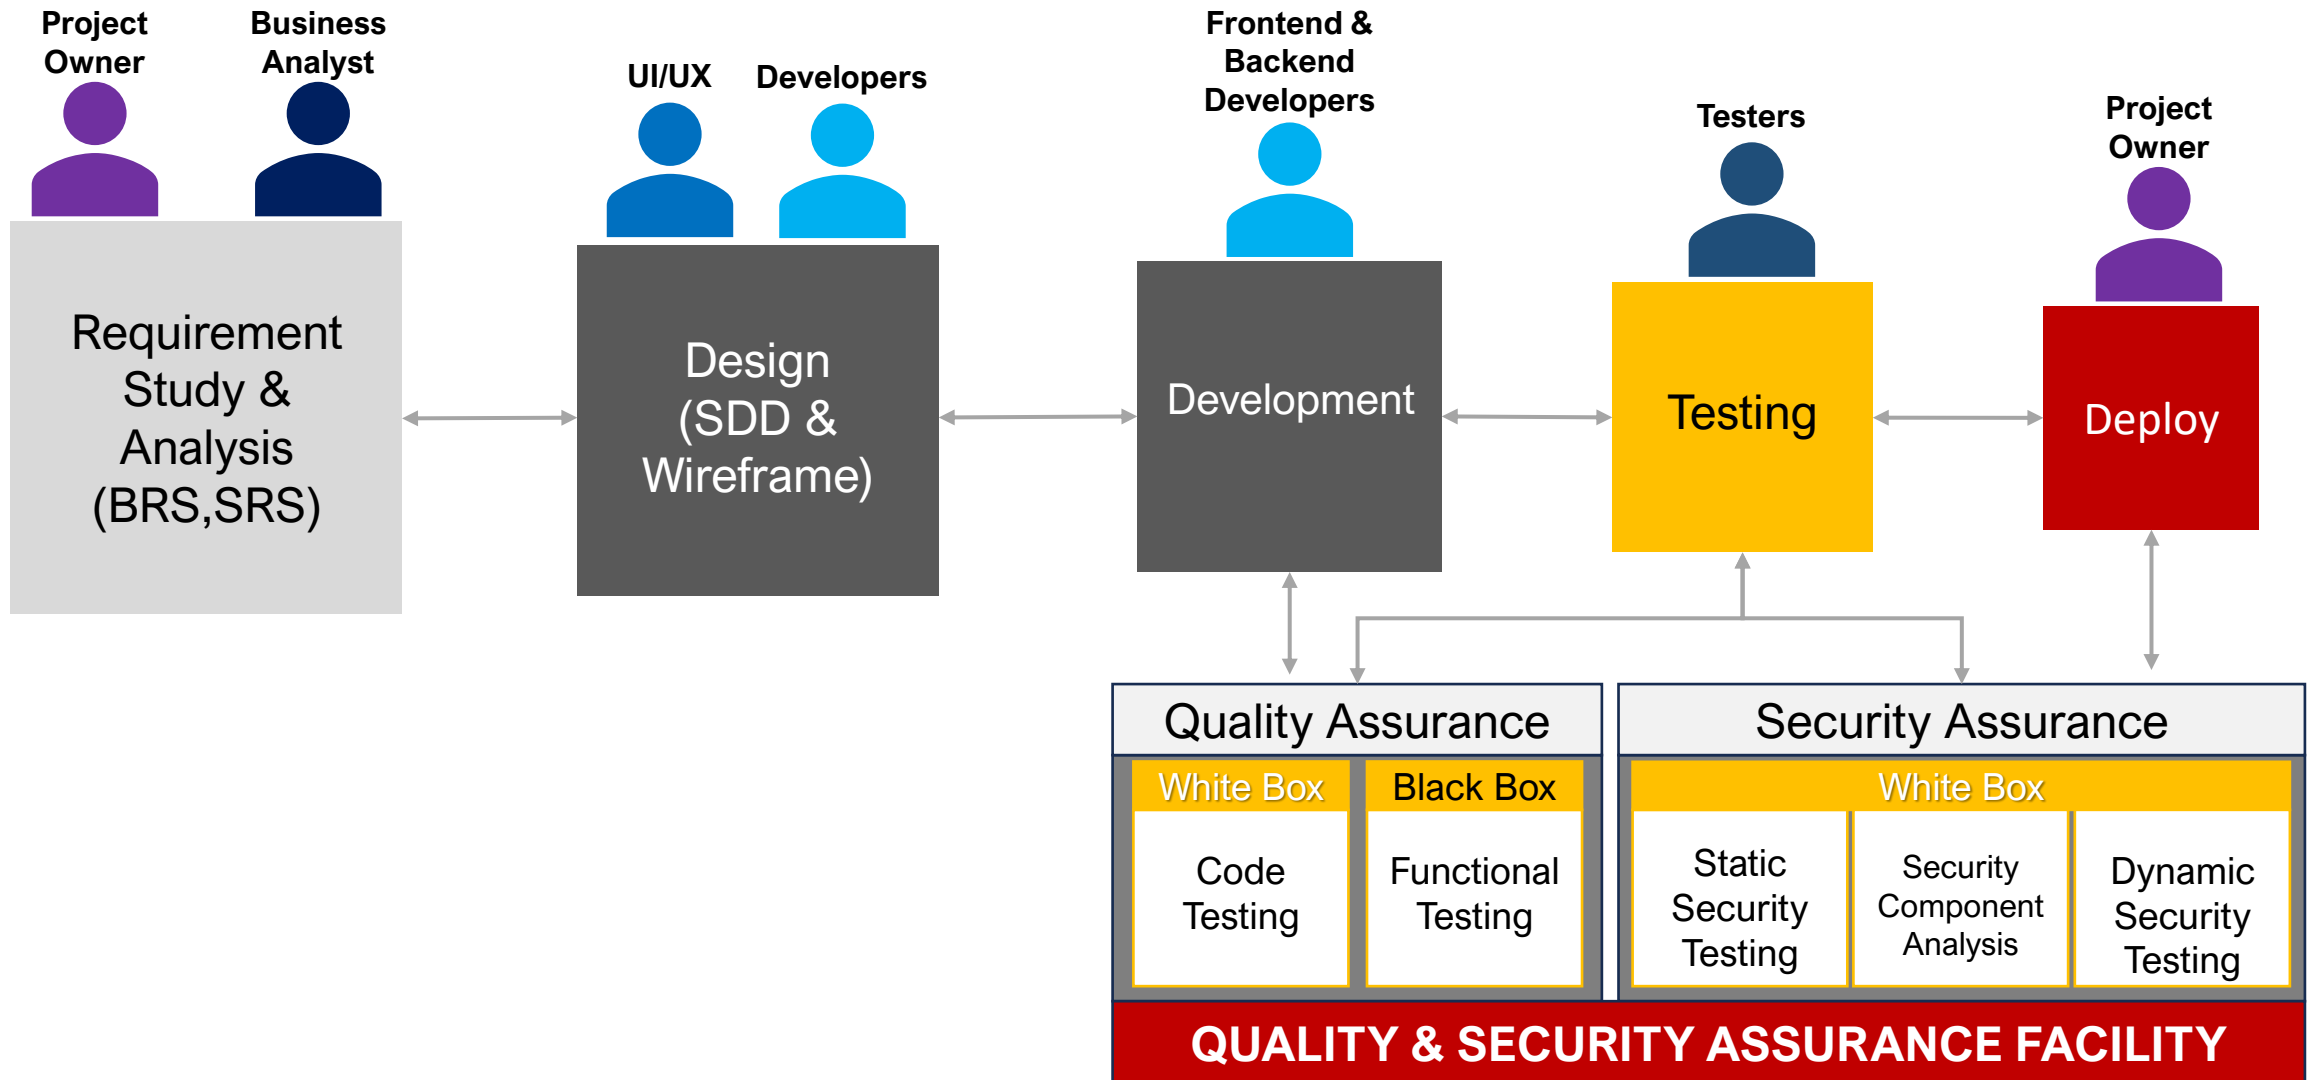

Mikkel Storm
Senior Director of Product, Courts & Justice

Easier adoption and value creation unlike other technologies, Leapwork can slide right into your organization and work with the people already present.
